VOICE INTERFACE FOR ELECTRONIC DOCUMENTS

BACKGROUND OF THE INVENTION

1. The Field of the Invention

The present invention relates to methods, systems, and computer program products for accessing electronic documents. More specifically, the present invention relates to methods, systems, and computer program products for providing a voice interface to electronic documents.

2. The Prior State of the Art

As computers have become ubiquitous in our day-to-day activities, the advantages of storing information electronically have steadily increased. One of the primary advantages of electronically stored information is its inherent versatility. For example, editing and exchanging electronic information is greatly simplified as compared to editing and exchanging documents stored in paper form only. Furthermore, any advantage attributable to having a physical document is retained in electronic storage because a "hard copy" of an electronic document may be readily produced from the electronic version.

Another significant advantage of electronically stored documents is that of providing enhanced access to information. Over the past few years, the improved access offered by electronic documents has become so important that many organizations expend substantial resources in scanning paper documents to store them electronically. Routine facsimile transmission further exemplifies the value of electronic access to documents. Arguably, it is access to information that fuels what many refer to as the Information Age.

Today, perhaps the most prominent example of access to electronically stored information is the Internet. Literally millions of people depend on the Internet for email, banking, investing, shopping, news, entertainment, and social interaction. Not too many

1 years ago, sharing information over the Internet was principally the domain of academicians
2 and scientists. For members of the general public, the cryptic nature of access tools and the
3 essentially prohibitive computer hardware requirements meant virtual anonymity for the
4 Internet. However, the advent of hypertext navigation and the World Wide Web ("Web"),
5 in conjunction with modestly priced and increasingly powerful personal computers, has
6 propelled the Internet to the forefront of public attention and has made the Internet an almost
7 indispensable source of information.

8 Likewise, use of early cellular telephone technology was also limited. Initially,
9 problems included providing coverage beyond major metropolitan areas, the expense and
10 size of cellular telephones, and the expense of airtime. As a result, cellular telephones were
11 used mostly for vital business concerns rather than for personal matters. Over the past few
12 years, however, the cellular industry has solved, to one degree or another, most of the
13 problems that inhibited cellular's general acceptance. Today, cellular telephone use has
14 dramatically increased and, for many people, is the primary means of communicating with
15 others.

16 Increasing dependence on cellular telephones as a primary means of communication
17 together with increasing dependence on the Internet as a source of information presents an
18 unfortunate problem: a primary means of communication, the cellular telephone, does not
19 interface well with a vital source of information, the Internet. The problem is compounded
20 in that the hypertext navigation of the Web is visually oriented, making a computer with a
21 relatively large screen an obvious choice for access, yet the size of cellular telephones is
22 much more conducive to convenient portability. Frequently cellular telephones are clipped
23 to belts or placed in pockets or purses; portable computers require their own case and a free

24

1 hand to carry. Moreover, public telephones are available to those who do not carry cellular
2 telephones, whereas public computers have a minimal presence at best.

3 Although the prior art includes some attempts to solve the problem of accessing
4 electronic documents by voice, none of the prior art teachings offer the comprehensive
5 solution provided by the present invention. Specifically, Figures 1 and 2 show the prior art's
6 approaches to accessing Internet documents, approaches that have proven to be generally
7 inadequate in many ways. The approach designated generally at 100 illustrates a Source 110
8 of electronic content that is accessible through Telephone 120. The content in Source 110 is
9 written in a markup language specifically designed for telephone access.

10 Using Motorola's Voice eXtensible Markup Language ("VoxML"), the information
11 includes explicit elements or tags for enabling voice interaction. However, requiring
12 explicit voice elements presents a serious drawback: it provides no means for accessing
13 content that does not include the VoxML's voice elements. Thus, VoxML provides no
14 access to the wealth of content already available on the Web, written mostly in HyperText
15 Markup Language ("HTML"). In other words, to provide full Web access, the entire content
16 of the Web would need to be rewritten to include VoxML's explicit voice tags.

17 Moreover, VoxML's facilities for authoring voice content do not provide for using a
18 common source to generate both audio and visual interfaces. Therefore, even if a single
19 document contains both visual and audio elements, the elements must be maintained
20 separately; any changes to one must be replicated in the other.

21 Figure 2 shows another approach to the problem, designated as 200, that has proven
22 to be generally inadequate. HTML Source 210, representing existing Web content, can be
23 accessed through one of two interfaces. First, as is well known in the art, Visual Browser
24 220 provides a visual interface for Monitor 230. Second, Static Translation 240 provides an

1 audio interface for Telephone 250. Static Translation 240 is a copy of at least a portion of
2 HTML Source 210 that has been manually altered to include audio elements. Someone
3 examines HTML Source 210, creates a corresponding audio interface, and then stores the
4 audio interface in Static Translation 240. A user who is interested in accessing HTML
5 Source 210 through telephone 250 interacts with the audio interface provided by Static
6 Translation 240.

7 The solution of Figure 2 has the advantage of providing an audio interface without
8 obligating HTML content providers (e.g., providers of HTML Source 210) with the
9 responsibility of maintaining an audio interface. However, this approach imposes new
10 problems that may be nearly equal to the one it proposes to solve. Like the approach in
11 Figure 1, a significant amount of work must be devoted to identifying HTML content of
12 interest and then modifying that. Once the content has been initially modified, each time
13 HTML Source 210 changes, corresponding changes must be made to the Static Translation
14 240. Naturally, some delay will occur between the time HTML Source 210 changes and the
15 corresponding modifications are made to Static Translation 240. For content that changes
16 frequently, such as information regarding financial markets, frequent and constant updating
17 is a significant burden. Moreover, because of the incredible amount of HTML content
18 available on the Web, only a small portion could be modified to include an audio interface
19 and placed in Static Translation 240, leaving vast Web content completely inaccessible to
20 Telephone 250.

21 One area that may be particularly well-served by telephone access is the personal
22 home page market, as it is becoming increasingly popular for content providers, such as
23 Yahoo!, to offer personal Web home pages. These personal pages allow a user to select
24 from a variety of content that is placed on a single Web page. For example, a user may

1 chose to have current data regarding various financial markets, weather, sports stories,
2 headlines, technology, calendaring, contacts, entertainment, travel, reference, etc., appear on
3 a personal home page. By providing a single, convenient source of diverse information,
4 these personal home pages are highly attractive.

5 There is no end in sight for the increasing growth of the Internet nor is it likely that
6 the Internet's expanding importance as a source of information will diminish any time soon.
7 Considering the corresponding growth in cellular telephone use and the cellular telephone's
8 convenient size, providing cellular access to the Internet in particular and electronic content
9 in general would be a great benefit. Furthermore, public telephones also could provide
10 beneficial Internet access for those who do not carry cellular telephones. However, the prior
11 art lacks effective methods, systems, and computer program products for providing voice or
12 audio interfaces to electronic content.

SUMMARY OF THE INVENTION

The problems in the prior state of the art have been successfully overcome by the present invention, which is directed to methods, systems, and computer program products for providing a voice interface to electronic documents. The present invention allows for access to existing electronic content without requiring any modification to the content source. Furthermore, the present invention allows for a common content source to incorporate both a visual and audio interface, without including separate markups for each interface, making the content source more easily maintained. Although embodiments of the present invention are described as applied to Web pages in an Internet context, the invention is not limited to any particular format of electronic information or any particular network typically used for accessing electronic content.

In one preferred implementation, the present invention works with content that operates as an index to additional content, such as is typical with personal home pages. The present invention takes the content of a personal home page and creates a hierarchy of categories that are presented to a client. There is no requirement that the client is necessarily a person. For example, the client may be an intervening service needing an audio interface to electronic documents. The present invention generates an audio representation of the available categories and allows the client to select one. Navigating through the hierarchy, the client may eventually reach the bottom hierarchy level, with links pointing to content that includes text mixed with links. At this point, the present invention reports the number of links, and provides an audio representation of the text.

Because creating categories requires some knowledge of the layout for personal home pages, Web content in general will not be mapped into various categories. For unmapped content, the present invention operates as described above with respect to text

1 mixed with links, by reporting the number of links on a page and providing an audio
2 representation of the page's text. Alternatively, a client may choose to hear an audio
3 representation that only includes links. In response, the client may select a link of interest to
4 follow. The present invention also provides a variety of global commands that are available
5 to assist navigation.

6 The foregoing methods, systems, and computer program products provide significant
7 advantages over the prior art. Because the present invention provides an audio interface
8 without requiring any modification to existing content, the telephone access will be readily
9 available to the vast information available electronically. Moreover, the present invention
10 also provides for organizing certain content by mapping links and text to a hierarchy of
11 categories to aid navigation.

12 These and other objects, features, and advantages of the present invention will
13 become more fully apparent from the following description and appended claims, or may be
14 learned by practicing the invention as set forth below.

BRIEF DESCRIPTION OF THE DRAWINGS

A more extensive description of the present invention, including the above-recited features, advantages, and objects, will be rendered with reference to the specific embodiments that are illustrated in the appended drawings. Because these drawings depict only exemplary embodiments, the drawings should not be construed as imposing any limitation on the present invention's scope. As such, the present invention will be described and explained with additional specificity and detail through use of the accompanying drawings in which:

Figure 1 is a block diagram showing a prior art solution for providing a voice interface to electronic content;

Figure 2 is a block diagram showing another prior art solution for providing a voice interface to electronic content:

Figure 3 is a block diagram illustrating the relationship of the present invention to other components used in accessing electronic content:

Figure 4 is a block diagram showing increased detail of the components that make up the present invention:

Figure 5 is a flow chart illustrating a preferred embodiment of the present invention that includes the use of mapped categories:

Figure 6 is an example of electronic content that is used to describe the operation of the embodiment illustrated in Figure 5:

Figure 7 shows the portfolios portion of the content from Figure 6 in greater detail.

Figure 8 shows the weather portion of the content from Figure 6 in greater detail.

Figure 9 shows the headlines portion of the content from Figure 6 in greater detail.

1 Figure 10 illustrates the hierarchy generated by the present invention for the content
2 shown in Figures 6-9;

3 Figure 11 is a flow chart illustrating a preferred embodiment of the present invention
4 that does not include the use of mapped categories; and

5 Figure 12 is an example of electronic content that is used to describe the operation of
6 the preferred embodiment illustrated in Figure 11.

1 **DETAILED DESCRIPTION OF THE PREFERRED EMBODIMENTS**

2 The invention is described below with reference to drawings. These drawings
3 illustrate certain details of specific embodiments that implement the systems, methods, and
4 computer program products of the present invention. However, describing the invention with
5 drawings should not be construed as imposing, on the invention, any limitations that may be
6 present in the drawings. For example, the embodiments that follow describe the present
7 invention in the context of Web pages usually accessed over the Internet. Nevertheless, the
8 scope of the present invention is not limited to electronic content formatted as Web pages
9 nor is it limited to content that is ordinarily accessed through the Internet.

10 The present invention relates to methods, systems, and computer program products
11 for providing an audio interface to electronic content. Two embodiments are described
12 below. Each embodiment is a significant advance over the prior art because no modification
13 of the content's source is required. The first embodiment is most useful for content that is
14 arranged as a hierarchical index, with broad topic indices leading to more specific topic
15 indices and eventually to individual documents discussing a particular subject. The present
16 invention creates a hierarchy of categories and indices. A corresponding audio
17 representation allows a client to navigate through the content, where the client need not be a
18 person. For example, the present invention could be accessible to other services needing a
19 voice interface to electronic content. Upon reaching the bottom level in the index hierarchy,
20 selection of a link leads to specific documents.

21 Reaching specific documents introduces the operation of the second embodiment.
22 Here, the present invention identifies the number of links and provides the user with an
23 audio representation of the document text. A client may also choose to hear the links to
24 navigate among various documents. Depending on the initial page identified by a client, the

1 present invention may begin operating according to either of these two embodiments. Each
2 embodiment includes the benefits of providing an audio interface to dynamic Web content
3 without requiring providers to modify their documents.

4 The embodiments of the present invention may comprise a special purpose or
5 general-purpose computer comprising various computer hardware. Other embodiments
6 within the scope of the present invention also include computer-readable media having
7 computer-executable instructions or data structures stored thereon. Such computer-readable
8 media can be any available media that can be accessed by a general-purpose or special-
9 purpose computer. By way of example, and not limitation, such computer-readable media
10 can comprise RAM, ROM, EEPROM, CD-ROM or other optical disk storage, magnetic disk
11 storage or other magnetic storage devices, or any other medium which can be used to store
12 the desired executable instructions or data structures and which can be accessed by a
13 general-purpose or special-purpose computer.

14 When information is transferred or provided over a network or other
15 communications connection to a computer, the computer properly views the connection as a
16 computer-readable medium. Thus, such a connection is also properly termed a computer-
17 readable medium. Combinations of the above should also be included within the scope of
18 computer-readable media. Computer-executable instructions comprise, for example,
19 instructions and data which cause a general-purpose computer, special-purpose computer, or
20 special-purpose processing device to perform a certain function or group of functions. The
21 computer-executable instructions and associated data structures represent an example of
22 program code means for executing the steps of the invention disclosed herein.

23 The invention will be described in the general context of computer-executable
24 instructions, such as program modules, being executed by a computer. Generally, program

1 modules include routines, programs, objects, components, data structures, or the like that
2 perform particular tasks or implement particular abstract data types. Moreover, those skilled
3 in the art will appreciate that the invention may be practiced with other computer system
4 configurations, including hand-held devices, multi-processor systems, microprocessor-based
5 or programmable consumer electronics, network PCs, minicomputers, mainframe
6 computers, and the like. The invention may also be practiced in distributed computing
7 environments where tasks are performed by remote processing devices that are linked
8 through a communications network. In a distributed computing environment, program
9 modules may be located in both local and remote memory storage devices.

10 Turning now to Figure 3, an environment, including the present invention, for
11 accessing electronic content is referenced generally as 300. HTML Source 310 is an
12 example of electronic content that is common to the Web. However, the invention imposes
13 no particular requirement on the format of the content's source or on how the content
14 typically is accessed. Visual Browser 320 accesses HTML Source 310 and provides a visual
15 representation for Monitor 330. Visual browsers, such as Microsoft's Internet Explorer and
16 Netscape's Navigator are both well known in the art. Voice Browser 340 provides an audio
17 interface to HTML Source 310 that is suitable for use by Telephone 350. Alternatively,
18 Voice Browser 340 could be used in conjunction with Visual Browser 320 to provide
19 simultaneous visual and audio interfaces. Similarly, Visual Browser 320 could also be
20 specialized to generate content that would be suitable for the limited space of a telephone
21 display. Then, Visual Browser 320 and Voice Browser 340 could be used simultaneously
22 through Telephone 350.

23 Figure 4 shows some of the basic components that make up Voice Browser 340. In
24 addition to the following relatively brief treatment, the operation of these basic components

1 will be described in greater detail with respect to the flow chart of Figures 5. Line/Call
2 Manager 410 is responsible for establishing and maintaining telephone connections. Text to
3 Speech 420 converts the text it receives to speech that can be communicated to a client and
4 is an example of processor means for generating an audio representation of electronic
5 content. Text to Speech 420 may also include some prerecorded speech. For example,
6 prerecorded speech could be used for frequently used words, links, text or prompts. Modules
7 for implementing both Line/Call Manager 410 and Text to Speech 420 are well known in
8 their respective arts. Document Parsing and Audio Layout 430 receives electronic content
9 and identifies any text and links included within the electronic content and is an example of
10 processor means for parsing electronic documents. (Links are content elements that lead to
11 other locations in the same document or to other documents entirely. HTML links, for
12 example, create locations within a document's visual representation that may be selected to
13 further explore the link's subject, such as defining a word or leading to related material.) The
14 audio layout portion may organize certain content into a hierarchy as an aid to navigation
15 and is an example of processor means for mapping any text and links identified into one or
16 more categories.

17 Speech Recognition 440 interprets the audio or voice data received from a client so
18 that Command Processing 450 can execute the client's request. Speech Recognition 440 is
19 an example of processor means for receiving a spoken instruction from a client. Modules for
20 implementing Speech Recognition 440 are well known in the respective art. Command
21 Processing 450 may also perform various general control functions and coordinate the
22 operation of other components. Document Retrieval Protocols 460 request and receive the
23 electronic content of interest and are examples of processor means for obtaining electronic
24 documents and for following links. These Document Retrieval Protocols 460 are also well

1 known in the art of accessing electronic content, especially in the context of HTML
2 documents.

3 As described in Figures 3 and 4, Voice Brower 340 provides an audio interface
4 without imposing the limitations found in prior art solutions. Specifically, Voice Brower
5 340 does not require content providers to modify their documents to support a voice
6 interface. Therefore, the dynamic content of the Web is available to Voice Brower 340 at the
7 same instant it is available to Visual Brower 320. How Voice Brower 340 operates to create
8 an audio interface is described more fully with reference to Figure 5.

9 All acts shown in the flow chart of Figure 5 will be described by using the document
10 shown generally in Figure 6, and more specifically in Figures 7-9. Because each figure
11 number is incorporated into individual references, i.e., reference 650 appears in Figure 6 and
12 reference 940 appears in Figure 9, the specific figure number may be inferred and therefore
13 may not be explicitly identified in the discussion that follows. It should also be noted that
14 while the steps of Figure 5 are shown sequentially, there is no requirement that one step be
15 completed prior to the next step beginning. For example, the prompts can be interrupted or
16 anticipated by making a selection before the prompt finishes or before it even begins. Figure
17 6 is an example of content that provides hierarchical indices leading to more textually
18 oriented material and is suitable for enhanced mapping.

19 In step 510, a particular document is identified or selected. For example, Text to
20 Speech 420 may prompt the client to select or request a desired source of information.
21 Options include unified messaging, home page, favorites, etc. Prompts for unified
22 messaging, home page, favorites, etc., are examples prompts that may be prerecorded and
23 included in Text to Speech 420. In response, the client selects the personal home page
24 shown in Figure 6. The present invention can also include a variety of global spoken

1 navigation commands, such as fast forward, rewind, cancel, forward, back, home, links, fax,
2 telephone, and email. Fax, telephone, and email are instructions to fax, telephone (voice
3 mail), or email the current document's contents, or some portion thereof, in audio and/or
4 visual form based on what is appropriate for the particular instruction given, to someone
5 selected from the client's contact list; the other terms retain their ordinary meaning. For
6 example, an instruction to fax would send a visual representation of at least a portion of the
7 document's contents to the fax recipient. Links is a request to hear a page's links only rather
8 than its text.

9 Next, in step 520, Document Retrieval Protocols 460 retrieve or obtain the
10 document. No particular protocols are imposed according to the present invention. For
11 example, the document may be stored locally, stored on a local area network, stored on a
12 private wide area network, or stored on the Internet. The document shown in Figure 6 is
13 retrieved from the Internet. Having obtained the requested document, in step 530 Document
14 Parsing & Audio Layout 430 next parses the content to identify any title, any text, any links,
15 and any link names included within the document. A link name is simply the text that forms
16 the link. For example, "Weather" is the link name of Weather category 810.

17 Parsing the retrieved document to identify title, text, links, and link names that may
18 be present illustrates how an audio interface may be provided without requiring changes to
19 the document source. In conjunction with the other aspects of the present invention, this
20 allows immediate audio access to dynamic visual content that otherwise would be
21 unavailable in the prior art. Once parsed, in step 540 the text and links included within the
22 document are mapped to various categories.

23 Figure 6 identifies the categories present in the selected document and also shows
24 some portions of the document that are filtered out and ignored. Top Banner 610 and

1 Bottom Banner 660 include a variety of images and other content that is not particularly
2 suitable for voice interaction. However, the enhanced mapping identifies three categories of
3 information stored on the page, Portfolios 630, Weather 640, and Headlines 650. Each of the
4 categories may also include content that is ignored. For example, Graphic 840 (see Figure 8)
5 is eliminated because there is no speech analog, although alternate information provided
6 within the image tag, such as the text of the "alt" attribute, could be used. Search Fields and
7 Instructions 770 and 850 (see Figures 7 & 8) are eliminated because it is impractical to enter
8 this type of data by speaking into a telephone.

9 There are a variety of ways to identify the page content that should be mapped. For
10 example, it may be possible to use HTML tags, including attributes, as an indication of
11 various categories. The enhanced mapping feature of the present invention for My Yahoo!
12 pages looks for a tag with a particular background color attribute. Other mappings may use
13 other HTML tags and/or tag attributes to identify categories. While enhanced mapping
14 beyond the default mapping provided by parsing text and links requires some degree of
15 customization, a single mapping can be used for all corresponding pages provided by a site.
16 Thus, a single My Yahoo! enhanced mapping provides enhanced mapping for all My
17 Yahoo! pages.

18 Figure 10 shows the hierarchy created by enhanced mapping of the document shown
19 in Figure 6. The Categories 1010 include Portfolios 710, Weather 810, and my Front Page
20 Headlines 910. The First-level of Links 1020 includes Quotes 720 within the Portfolios 710
21 category, Salt Lake City, UT 820 within the Weather 810 category, and Top Stories from
22 Reuters 920, Tech News from News.com 930, and Top Sport Stories from AP 940 within
23 the my Front Page Headlines 910 category. The Second-level of Links 1030 includes DJIA
24 730 and NASDAQ 750 within the Quotes 720 first-level of Portfolios 710 and the individual

1 story headlines 922-926, 932-936, 942-946 within the first-level links Top Stories from
2 Reuters 920, Tech News from News.com 930, and Top Sport Stories from AP 940 all within
3 the My Front Page Headlines 910 category. The Text of Stories 1040 are documents that are
4 produced by selecting any of the Second-level Links 1030.

5 In step 550, Text to Speech 420 generates the audio representation that corresponds
6 to the document. It is not necessary that all of the audio representation be generated at one
7 time. For example, a portion of the audio may be generated and communicated to the client
8 while another portion is being generated. The audio may also be generated on demand as
9 each level in the mapped hierarchy is accessed.

10 Next, in steps 560-590, Text to Speech 420 prompts the client to make various
11 selections from categories 1010, First-level Links 1020, and Second-level Links 1030 to
12 reach Text of Stories 1040. Again, some of these prompts may be prerecorded. Because
13 each of the categories shown in Figures 7-9 includes options that may not be relevant to or
14 available in other categories, steps 560-590 will be discussed separately for Figure 7, Figure
15 8, and Figure 9. Thus, steps 560-590 represent all possible choices. For certain documents,
16 some of the steps may not be required. The foregoing description presumes that the
17 selections made in steps 560-580 do not result in a document that is mapped.

18 Assuming that a client chooses Portfolios 710 in response to the category selection
19 prompt in step 560, the following will occur. Because Portfolios 710 includes only a single
20 first-level link, Quotes 710, prompting in step 570 is skipped, but the text of Quotes 710
21 played, and the client will be prompted to select a second-level link, either DJIA 730 or
22 NASDAQ 750 (i.e., "Quotes, please choose from DJIA or NASDAQ"). In step 590,
23 choosing DJIA 730 will play audio of Text 740 and choosing NASDAQ 750 will play audio
24 of Text 760. However, DJIA 730 and NASDAQ 750 are also links. Although choosing the

1 Links global command would not alter the choices offered, it would alter the action taken by
2 making a selection. In this case choosing DJIA 730 or NASDAQ 750 would follow the
3 respective links rather than playing the audio representation of Text 740 or Text 760.

4 Selecting Weather 810 at step 560 similarly leads to skipped steps. However, in this
5 case, both steps 570 and steps 580 are skipped because Salt Lake City, UT 820 is the only
6 first-level link and there are no second-level links. Therefore, selecting Weather 810 will
7 result in the audio representation of Text 830 being played (i.e., "Salt Lake City, UT, 49 to
8 82 F") at step 590. A Links command could also be issued here to identify Salt Lake City,
9 UT 820, but the link would only be followed if the client explicitly selected it.

10 In contrast, selecting My Front Page Headlines 910 at step 560 does not result in any
11 skipped steps. In step 570, the client will be prompted to select from the first-level links Top
12 Stories from Reuters 920, Tech News from News.com 930, and Top Sports Stories from AP
13 940. Selecting any of these first-level links in step 570 will result in step 580 prompting for
14 the stories associated with the first-level link. For example, selecting Top Sport Stories from
15 AP 940 in step 570 will lead to step 580 prompting the client to select from NL Playoffs
16 Notebook 942, NFL Roundup 944, and America's Cup Enters Third Day 946. In step 590,
17 an audio representation of the document text corresponding to the selection made in step 580
18 will be played to the client.

19 Portfolios 710, Weather 810, and My Front Page Headlines 910 present a large
20 amount of information to the client. As the client moves from one category to another, each
21 category presents an increasing number of links or options. In a visual environment, it is a
22 relatively simple matter for the client to scan a page and remember the links or options that
23 are currently available. However, in an audio representation, it is significantly more
24 difficult to keep the links and options of one page separate from the links and options of

1 another page. Therefore, one aspect of the present invention accumulates all links and
2 options from certain pages that are visited and makes the accumulated links and options of a
3 previously visited page available in a subsequent page.

4 Accumulation is desirable because "pages" are a visual motif that does not
5 necessarily carry over into an audio representation. Particularly in a personal home page
6 environment, a client may view the personal home page as simply a monolithic source of
7 information. Someone familiar with the available content who is moving between various
8 levels in the hierarchy, may find an explicit requirement of returning to a particular page, for
9 the sole purpose of selecting a link or other option from that page, cumbersome or even
10 annoying. Therefore, accumulation preserves the organizational benefits of hierarchical
11 organization—the client continues to be informed regarding the content of a particular
12 page—without limiting the availability of links to only those present on the particular page.

13 For example, selecting the NL Playoffs Notebook 942 link of Top Sport Stories from
14 AP 940 found in the category My Front Page Headlines 910, will lead to the NL Playoffs
15 Notebook document. That document contains both text and links that are available to the
16 client. In a typical visual browser, if the client next wanted to choose category Weather 810,
17 the user would need to return to Web Page 600 first. However, the present invention, by
18 accumulating links, would allow the client to select Weather 810 from the NL Playoffs
19 Notebook document since Web Page 600 had been previously visited. In a preferred
20 embodiment, accumulation is limited to certain predetermined Web content that would
21 benefit from the feature, such as personal home pages.

22 In contrast to Figure 5, Figure 11 is a flow chart illustrating the operation of a
23 preferred embodiment of the present invention that provides only the default mapping of
24 separating text and links. In step 1110, a client selects the option of starting with a list of

1 favorite Internet sites. Text to Speech 420 prompts the user to select one of the sites listed,
2 step 1120. As before, in step 1130 the document is retrieved using the protocols that are
3 appropriate given the document's location. Again, as before, the content is parsed in step
4 1140 to identify any title, any links, any link names, and any text included in the document.

5 Figure 12 is an example of Electronic Content 1200 that is useful in describing the
6 embodiment disclosed in Figure 11. Parsing step 1140 identifies title 1240 (HTML titles are
7 indicated by explicit tags), links and corresponding link names 1210, 1220, and 1230, as
8 well as the document text. With these various elements identified, an audio representation of
9 Electronic Content 1200 is generated in step 1150. Once generated, the document title is
10 reported in step 1160 and is followed by reporting the number of links in step 1170.

11 Just as with the description of Figure 5, parsing the retrieved document to identify
12 any title, any text, any links, and any corresponding link names that may be present shows
13 how an audio interface may be provided without requiring changes to the document source.
14 Together with the other aspect of the present invention, this provides immediate audio
15 access to dynamic, visually-oriented, content that otherwise would be inaccessible to the
16 prior art.

17 In the case of the Electronic Content 1200, the present invention reports the
18 document title as Guide to Filing a Utility Patent Application 1240. There are three links,
19 named U.S. Patent and Trademark Office 1210, www.uspto.gov 1220, and Patent and
20 Trademark Depository Library 1230. Then, in step 1180, an audio representation of the
21 electronic document's text is played for or communicated to the user. In the case of
22 Electronic Content 1200, this text includes everything except the title 1240. The client may
23 also choose the global Links command, to hear an audio representation of the three links,

1 1210, 1220, and 1230. By choosing a link, the client instructs the present invention to
2 follow the link, as in step 1120, beginning audio interface process anew at step 1130.

3 The present invention may be embodied in other forms without departing from its
4 spirit or essential characteristics. As properly understood, the preceding description of
5 specific embodiments is illustrative only and in no way restrictive. For example, using Web
6 pages accessible over the Internet to describe the present invention does not limit the
7 invention to any specific format of electronic content or any particular means of accessing
8 electronic content. The scope of the invention is, therefore, indicated by the appended
9 claims as follows.

10 What is claimed and desired to be secured by United States Letters Patent is:

1 1 In a system that includes an information service and an input/output device
2 for interacting with the information service, a method of providing an audio interface for
3 accessing electronic documents, the method comprising the acts of:

- 5 2 obtaining an electronic document;
6 3 parsing the electronic document to identify any text and any links included in
7 4 the electronic document; and
8 5 generating an audio representation of at least a portion of the parsed
9 6 electronic document, the audio representation being communicated to a client.

10 7 2. A method as recited in claim 1 further comprising the acts of:

11 8 obtaining at least two electronic documents, one of the at least two electronic
12 9 documents being designated as a prior electronic document and one of the at least
13 10 two electronic documents being designated as a subsequent electronic document;

14 11 parsing the at least two electronic documents to identify any text and any
15 12 links included in the at least two electronic documents; and

16 13 making any links identified in the prior electronic document available in the
17 14 subsequent electronic document.

18 15 3. A method as recited in claim 1 further comprising the act of mapping said
19 16 any text and said any links included in the electronic document to one or more categories.

20 17 4. A method as recited in claim 3 further comprising the acts of generating an
21 18 audio representation of the one or more categories.

1 A method as recited in claim 4 further comprising the act of prompting the
2 client to select one of the one or more categories.

3
4 6. A method as recited in claim 3 wherein the act of mapping includes creating
5 a hierarchy of said any text and said any links.

6
7 7. A method as recited in claim 1 further comprising the act of receiving an
8 instruction from the client.

9
10 8. A method as recited in claim 7 wherein the instruction received from the
11 client is at least one of an instruction to email, fax, or voice mail at least a portion of the
12 electronic document to a third party selected from the client's contact list.

13 9. A method as recited in claim 7 wherein the instruction is spoken into the
14 input/output device.

15 10. A method as recited in claim 7 wherein the audio representation includes at
16 least one link and wherein the instruction from the client is to select the at least one link,
17 further comprising the act of following the at least one link.

18 11. A method as recited in claim 1 wherein the audio representation includes
19 only ~~any~~ said links included in the electronic document.

1 11 A method as recited in claim 1 wherein the audio representation includes a
B2 count of said ~~any~~ links and ~~any~~ said text included in the electronic document.

3 12 A method as recited in claim 1 wherein the electronic document is written in
4 a markup language.

6 13 A method as recited in claim 12 wherein the markup language includes
7 elements that ~~are only~~ capable of describing the visual appearance of the electronic
B8 document.

10 14 A method as recited in claim 13 wherein the markup language is one of
11 hypertext markup language and extensible markup language.

14 15 A method as recited in claim 1 further comprising the act of providing the
15 user with a visual representation of the electronic document simultaneously with the act of
16 communicating the audio representation.

1 17. In an information system that has access to electronic documents and is
2 connected to a client by a telephony infrastructure, a method for providing the user with
3 telephone access to an electronic document, the method comprising the acts of:

4 parsing the electronic document to identify any text and any links included in
5 the electronic document;

6 mapping said any text and said any links included in the electronic document
7 to one or more categories; and

8 generating an audio representation of at least a portion of the parsed and
9 mapped electronic document, the audio representation being communicated to a
10 client.

12 18. A method as recited in claim 17 further comprising the act of prompting the
13 client to select one of the one or more categories.

15 19. A method as recited in claim 18 further comprising the acts of:

16 receiving an instruction from the client, the instruction selecting one of the
17 one or more categories; and

18 prompting the client to select at least one link from the selected category.

20 20. A method as recited in claim 17 wherein the act of mapping produces exactly
21 one category, further comprising the act of automatically selecting the one category.

1 21. A method as recited in claim 17 wherein the act of mapping produces a
2 hierarchy of one or more categories each having one or more links, the hierarchy including
3 one or more levels.

4

5 22. A method as recited in claim 21 further comprising the acts of:

6 prompting the client to traverse the hierarchy of one or more categories and
7 associated one or more links, automatically selecting any category and any
8 associated link when exactly one category and exactly one associated link is present;

9 receiving one or more instructions from the client to traverse the hierarchy, at
10 least one instruction selecting an electronic document with text; and

11 generating a audio representation of each part of the hierarchy that is visited,
12 the audio representation of the electronic document with text including a count of
13 any links and any text present in the document.

14

15 23. A method as recited in claim 17 further comprising the act of receiving an
16 instruction from the client, wherein the instruction is spoken into the telephone.

17

18 24. A method as recited in claim 23 wherein the instruction received from the
19 client is at least one of an instruction to email, fax, or voice mail at least a portion of the
20 electronic document to a third party selected from the client's contact list.

21

22 25. A method as recited in claim 17 wherein the information system obtains the
23 electronic document over the Internet.

1 26. A method as recited in claim 17 wherein the electronic document is written in
2 a markup language and the markup language includes elements that only are capable of
3 describing the visual appearance of the electronic document.

4

5 27. A method as recited in claim 26 wherein the markup language is one of
6 hypertext markup language and extensible markup language.

7

8 28. A method as recited in claim 17 further comprising the act of providing the
9 user with a visual representation of the electronic document simultaneously with the act of
10 communicating the audio representation.

11

12 29. A method as recited in claim 17 further comprising the acts of:
13 receiving a request from the client to access the electronic document; and
14 obtaining the electronic document.

1 30. In an information system that has access to electronic documents and is
2 connected to a client by a telephony infrastructure, a method for providing the user with
3 telephone access to an electronic document, the method comprising the acts of:

- 4 receiving a request from the client to access the electronic document;
5 obtaining the electronic document;
6 parsing the electronic document to identify any text and any links included in
7 the electronic document; and
8 generating an audio representation of at least a portion of the parsed
9 electronic document, the audio representation being communicated to a client.

10
11 31. A method as recited in claim 30 wherein the audio representation includes
12 any said text and a count of said any links included in the electronic document.

13
14 32. A method as recited in claim 30 further comprising the act of receiving an
15 instruction from the client.

16
17 33. A method as recited in claim 32 wherein the instruction is spoken into the
18 telephone.

19
20 34. A method as recited in claim 33 wherein the instruction received from the
21 client is at least one of an instruction to email, fax, or voice mail at least a portion of the
22 electronic document to a third party selected from the client's contact list.

1 35. A method as recited in claim 33 wherein the audio representation includes at
2 least one link and wherein the instruction from the client is to select the at least one link,
3 further comprising the act of following the at least one link.

4

5 36. A method as recited in claim 30 wherein the audio representation includes
6 only any said links included in the electronic document.

7

8 37. A method as recited in claim 36 wherein the audio representation includes
9 one or more links, further comprising the act of prompting the client to select one of the one
10 or more links.

11

12 38. A method as recited in claim 30 wherein the electronic document is written in
13 a markup language and the markup language includes elements that are only capable of
14 describing the visual appearance of the electronic document.

15

16 39. A method as recited in claim 30 wherein the markup language is one of
17 hypertext markup language and extensible markup language.

18

19 40. A method as recited in claim 30 further comprising the act of providing the
20 user with a visual representation of the electronic document simultaneously with the act of
21 communicating the audio representation.

1 41. In an information system that has access, through the Internet, to one or more
2 electronic documents, wherein the one or more electronic documents are written in a markup
3 language having elements that only are capable of describing the visual appearance of the
4 one or more electronic documents, and the information system is connected to a client by a
5 telephony infrastructure, a method for providing the user with telephone access to the one
6 more electronic documents, the method comprising the acts of:
7

8 obtaining one of the one or more electronic documents;
9 parsing the one electronic document to identify any text and any links
10 included in the one electronic document; and
11 generating an audio representation of at least a portion of the parsed one
12 electronic document, the audio representation being communicated to the client.

13 42. A method as recited in claim 41 further comprising the act of mapping said
14 any text and said any links included in the electronic document to one or more categories.

1 43. A method as recited in claim 41 wherein the act of mapping produces a
2 hierarchy of one or more categories each having one or more links, the hierarchy including
3 one or more levels, further comprising the acts of:

4 prompting the client to traverse the hierarchy of one or more categories and
5 associated one or more links, automatically selecting any category and any
6 associated link when exactly one category and exactly one associated link is present;

7 receiving one or more instructions from the client to traverse the hierarchy, at
8 least one instruction selecting an electronic document with text; and

9 generating a audio representation of each part of the hierarchy that is visited,
10 the audio representation of the electronic document with text including a count of
11 any links and any text present in the document.

12
13 44. A method as recited in claim 41 further comprising the act of receiving an
14 instruction from the client, wherein the instruction is spoken into the telephone.

15
16 543
17 A7
18 45. A method as recited in claim 44 wherein the instruction received from the
19 client is at least one of an instruction to email, fax, or voice mail at least a portion of the
20 electronic document to a third party selected from the client's contact list.

21
22 46. A method as recited in claim 44 wherein the audio representation includes at
23 least one link and wherein the instruction from the client is to select the at least one link,
24 further comprising the act of following the at least one link.

47. A method as recited in claim 41 further comprising the act of providing the user with a visual representation of the electronic document simultaneously with the act of communicating the audio representation.

1 48. In a system that includes an information service and an input/output device
2 for interacting with the information service, a method providing an audio interface to
3 navigating between a plurality of electronic documents, the method comprising the acts of:
4 obtaining a first electronic document;
5 parsing the first electronic document to identify any text and any links
6 included in the first electronic document;
7 generating an first audio representation of at least a portion of the parsed first
8 electronic document, the first audio representation being communicated to a client;
9 obtaining a second electronic document
10 parsing the second electronic document to identify any text and any links
11 included in the second electronic document; and
12 making any links identified in the first electronic document available for
13 selection in the second electronic document.

14

15 49. A method as recited in claim 48 further comprising the acts of:
16 mapping said any text and said any links included in the electronic document
17 to one or more categories; and
18 generating an audio representation of the one or more categories.

19

20 50. A method as recited in claim 48 further comprising the act of receiving an
21 instruction from a client, wherein the instruction is spoken by the client.

1 51. A system providing access, through an audio interface, to electronic
2 documents, wherein the electronic documents are written in a markup language having
3 elements that only are capable of describing the visual appearance of the electronic
4 documents, the system comprising:

5 processor means for obtaining an electronic document;
6 processor means for parsing the electronic document to identify any text and
7 any links included in the electronic document; and
8 processor means for generating an audio representation of at least a portion of
9 the parsed electronic document, the audio representation being communicated to a
10 client.

11
12 52. A system as recited in claim 51 further comprising processor means for
13 mapping said any text and said any links included in the electronic document to one or more
14 categories.

15
16 53. A system as recited in claim 51 further comprising processor means for
17 receiving a spoken instruction from the client.

18
19 54. A system as recited in claim 53 wherein the instruction received from the
20 client is at least one of an instruction to email, fax, or voice mail at least a portion of the
21 electronic document to a third party selected from the client's contact list.

55. A system as recited in claim 53 wherein the audio representation includes at least one link and wherein the instruction from the client is to select the at least one link, further comprising processor means for following the at least one link.

1 56. A computer program product for providing access, through an audio
2 interface, to electronic documents, wherein the electronic documents are written in a markup
3 language having elements that only are capable of describing the visual appearance of the
4 electronic documents, the computer program product comprising:

5 a computer-readable medium carrying computer-executable instructions for
6 implementing the method, the computer-executable instructions comprising:

7 program code means for obtaining an electronic document;

8 program code means for parsing the electronic document to identify
9 any text and any links included in the electronic document; and

10 program code means for generating an audio representation of at least
11 a portion of the parsed electronic document, the audio representation being
12 communicated to a client.

13
14 57. A computer-readable medium as recited in claim 56 wherein the computer-
15 executable instructions further comprises program code means for mapping said any text
16 and said any links included in the electronic document to one or more categories.

17
18 58. A computer-readable medium as recited in claim 56 wherein the computer-
19 executable instructions further comprises program code means for receiving a spoken
20 instruction from the client.

21
22 59. A computer-readable medium as recited in claim 58 wherein the instruction
23 received from the client is at least one of an instruction to email, fax, or voice mail at least a
24 portion of the electronic document to a third party selected from the client's contact list.

1
2 60. A computer-readable medium as recited in claim 58 wherein the audio
3 representation includes at least one link and wherein the instruction from the client is to
4 select the at least one link, wherein the computer-executable instructions further comprises
5 program code means for following the at least one link.

ABSTRACT OF THE INVENTION

Methods, systems, and computer program products for providing an audio interface to electronic documents. An audio interface receives a request for electronic content from a client and retrieves the requested document. Next, the document is parsed to identify various elements, such as title, text, and links included in the document. Many of those providing electronic content include hierarchical indices to aid clients in finding documents covering a particular topic. The audio interface includes a facility to preserve, enhance, or create this hierarchical organization by mapping a document's text and links into a corresponding audio hierarchy. The client is then presented with various options from which to make a selection. Outside of this hierarchy, the client receives the document title, the number of links contained within the document, an audio representation of the document's text, and may optionally chose to hear only the links included in the document. The audio interface also includes a number of global commands to facilitate navigation.

DECLARATION CLAIMING SMALL ENTITY STATUS
FOR A SMALL BUSINESS CONCERN

I, David L. Morton, hereby declare: that I am President of talk2.com, a corporation of the State of Nevada and having a principal place of business at 746 East Winchester Avenue, #210, Salt Lake City, UT 84107; I am empowered to act on behalf of talk2.com; and that talk2.com qualifies as a small business concern as defined in 13 C.F.R. § 121.3-18 and 37 C.F.R. § 1.9(d), for purposes of paying reduced fees to the Patent and Trademark Office under Section 41(a) and (b) of Title 35, United States Code, in that the number of employees of talk2.com, including those of its affiliates, does not exceed 500 persons. I understand that, for purposes of this declaration, (1) the number of employees is the average over the previous fiscal year of the number of persons employed on a full-time, part-time, or temporary basis during each of the pay periods of the fiscal year, and that (2) two business concerns are considered to be affiliates of each other when one business concern either directly or indirectly controls or has the power to control the other, or when a third party or parties control or have the power to control both business concerns.

I further declare that all rights, title, and interest relating to the invention entitled "VOICE INTERFACE FOR ELECTRONIC DEVICE," invented by Darren L. Wesemann, Dong-Kyun Nam, and Richard T. Newton, as described in the patent application filed concurrently herewith have been conveyed to and currently remain with talk2.com.

I acknowledge the duty to file, in the above-mentioned application or any patent issued in respect thereof, notification of any change in status resulting in loss of entitlement to small entity status prior to paying, or at the time of paying, the earliest of (1) the issue fee or (2) any

maintenance fee due after the date on which status as a small entity is no longer appropriate. I further declare that all statements made herein of my own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful, false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States Code, and that such willful, false statements may jeopardize the validity of the application, any patent issuing thereon, or any patent to which this declaration is directed.

Signed at Salt Lake City, Utah, this 15 day of December, 1999.

DECLARATION, POWER OF ATTORNEY, AND PETITION

We,

- (1) Name: Darren L. Wesemann
Address: 229 North Fairway Drive
North Salt Lake, UT 84054
Citizenship: United States of America
- (2) Name: Dong-Kyun Nam
Address: 847 East 7440 South #20
Midvale, UT 84047
Citizenship: Korea
- (3) Name: Richard T. Newton
Address: 372 East 1310 South
Kaysville, UT 84037
Citizenship: United States of America

declare: that our citizenship, residence address, and post office address are as set forth above; that we verily believe we are the original, first, and joint inventors of the subject matter of the invention or discovery entitled "VOICE INTERFACE FOR ELECTRONIC DOCUMENTS" for which a patent is sought and which is described and claimed in the specification attached hereto; that we have reviewed and understand the contents of the above-identified specification, including the claims, as amended by any amendment specifically referred to herein; and that we acknowledge the duty to disclose information which is material to the patentability of this application in accordance with Section 1.56(a) of Title 37 of the Code of Federal Regulations.

We declare further that all statements made herein of our own knowledge are true and that all statements made on information and belief are believed to be true; and further that these statements were made with the knowledge that willful, false statements and the like so made are punishable by fine or imprisonment, or both, under Section 1001 of Title 18 of the United States

Code, and that such willful, false statements may jeopardize the validity of the application or any patent issuing thereon.

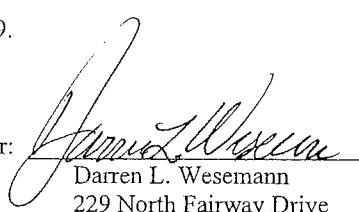

We hereby appoint as our attorneys and/or patent agents: RICK D. NYDEGGER, Registration No. 28,651; DAVID O. SEELEY, Registration No. 30,148; JONATHAN W. RICHARDS, Registration No. 29,843; JOHN C. Guide to Filing a Utility Patent Application

INTRODUCTION

1210

The U. S. Patent and Trademark Office (PTO) is the government agency responsible for examining patent applications and issuing patents. A patent is a type of property right. It gives the patent holder the right, for a limited time, to exclude others from making, using, or selling the subject matter that is within the scope of protection granted by the patent. The PTO determines whether a patent should be granted in particular case. However, it is up to the patent holder to enforce his or her own rights if the PTO does grant a patent.

The purpose of this guide is to provide you with basic information about filing a utility patent application. A patent application is a complex legal document, best prepared by one trained to prepare such documents. Thus, after reviewing this guide, you may wish to consult with a patent attorney or agent. Additional information is available:

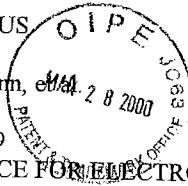

- by calling the PTO's General Information Services at 800-PTO-9199 or 703-308-4357,
- from the PTO's Web site at www.uspto.gov, and 1220
- at your nearest Patent and Trademark Depository Library (PTDL). You will find information 1230
- regarding the nearest PTDL at the end of this guide.

There are various types of patents – utility, design, and plant. There are also two types of utility patent application – provisional and nonprovisional. Each year the PTO receives approximately 200,000 patent applications. Most of these are for nonprovisional utility patents.

This guide contains information to assist you in filing your nonprovisional utility patent application. It discusses the required parts of the utility patent application and includes samples of some of the forms you may use. This information is generally derived from the Patent Act, found at Title 35 of the United States Code (U.S.C.), and Title 37 of the Code of Federal Regulations (CFR). These materials are available at PTDLs and at most law libraries.

While the filing of Information Disclosure Statements is voluntary, the procedure is governed by the guidelines of Section 609 of the Manual of Patent Examining Procedure and 37 C.F.R. §§ 1.97 and 1.98. To be considered a proper Information Disclosure Statement, Form PTO-1449 shall be accompanied by a copy of each listed patent or publication or other item of information and a translation of the pertinent portions of foreign documents (if an existing translation is readily available to the applicant), an explanation of relevance of each reference not in the English language, and should be submitted in a timely manner as set out in MPEP Sec. 609.

Examiners will consider all citations submitted in conformance with 37 C.F.R. § 1.98 and MPEP Sec. 609 and place their initials adjacent the citations in the spaces provided on this form. Examiners will also initial citations not in conformance with the guidelines which may have been considered. A reference may be considered by the Examiner for any reason whether or not the citation is in full conformance with the guidelines. A line will be drawn through a citation if it is not in conformance with the guidelines AND has not been considered. A copy of the submitted form, as reviewed by the Examiner, will be returned to the applicant with the next communication. The original of the form will be entered into the application file.

Each citation initiated by the Examiner will be printed on the issued patent in the same manner as references cited by the Examiner on Form PTO-892.

The reference designations "A1," "A2," etc. (referring to Applicant's reference 1, Applicant's reference 2, etc.) will be used by the Examiner in the same manner as Examiner's reference designations "A," "B," "C," etc. on Office Action Form PTO-1142.

INFORMATION DISCLOSURE STATEMENT
UNDER 37 C.F.R. § 1.97

Assistant Commissioner for Patents
Washington, D.C. 20231

Sir:

Please find, pursuant to 37 C.F.R. § 1.98(a)(1), the enclosed Form PTO-1449 which contains a list of all patents, publications, or other items that have come to the attention of one or more of the individuals designated in 37 C.F.R. § 1.56(c). While no representation is made that any of these references may be "prior art" within the meaning of that term under 35 U.S.C. §§ 102 or 103, the enclosed list of references is disclosed so as to fully comply with the duty of disclosure set forth in 37 C.F.R. § 1.56.

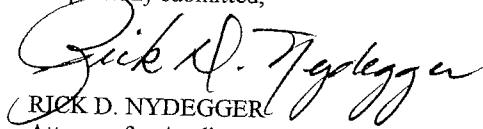

Moreover, while no representation is made that a specific search of office files or patent office records has been conducted or that no better art exists, the undersigned attorney of record believes that the enclosed art is the closest to the claimed invention (taken in its entirety) of which the undersigned is presently aware, and no art which is closer to the claimed invention (taken in its entirety) has been knowingly withheld.

TRANSMITTAL FOR INFORMATION DISCLOSURE STATEMENT

Assistant Commissioner for Patents
Washington, DC 20231

Sir:

Transmitted herewith for filing and pursuant to 37 C.F.R. § 1.97 is an Information Disclosure Statement.

Enclosed also are the following designated documents, as required under 37 C.F.R. §§ 1.97 and 1.98:

- Form PTO-1449 list of two (2) references submitted for consideration.
- Legible copies of the listed references or their relevant portions.
- All English translations of each nonenglish reference, if any, within the possession, custody, control or availability of anyone designated in 37 C.F.R. § 1.56(c) (see 37 C.F.R. § 1.98(c)).

The following are included within the Information Disclosure Statement if applicable and as required under 37 C.F.R. § 1.98:

- Concise explanation of relevance of each reference not in English and unaccompanied by an English translation.
- Statement that certain listed references not enclosed are substantially cumulative of an enclosed reference.
- Statement that certain listed references not enclosed were previously cited by or submitted to the Office in the identified prior application which is relied upon for an earlier filing date under 35 U.S.C. § 120.

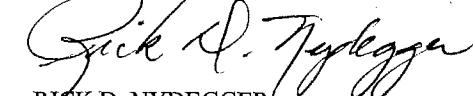

RECEIVED
MAR 30 2000
TC 2700 MAIL ROOM

In order to secure consideration of the items designated above, one or more of the following, if required, is also enclosed:

- Promptness Certification.
- Check No. _____ in the amount of \$240.00 constituting submission fee under 37 C.F.R. 1.17(p);
- Petition for Consideration and Check No. _____ in the amount of \$_____.
- In the event that 37 C.F.R. § 1.97(c) applies and the Examiner is not satisfied that the Promptness Certification meets the requirements of 37 C.F.R. § 1.97(e), or in any other event remediable by a fee, please credit any over payment or charge any additional fees to Deposit Account No. 23-3178 of the undersigned.

Dated this 28 day of MARCH, 2000.

Respectfully submitted,

RICK D. NYDEGGER

References Cited by Applicants

While the filing of Information Disclosure Statements is voluntary, the procedure is governed by the guidelines of Section 609 of the Manual of Patent Examining Procedure and 37 C.F.R. §§ 1.97 and 1.98. To be considered a proper Information Disclosure Statement, Form PTO-1449 shall be accompanied by a copy of each listed patent or publication or other item of information and a translation of the pertinent portions of foreign documents (if an existing translation is readily available to the applicant), an explanation of relevance of each reference not in translation is readily available to the applicant), an explanation of relevance of each reference not in the English language, and should be submitted in a timely manner as set out in MPEP Sec. 609.

Examiners will consider all citations submitted in conformance with 37 C.F.R. § 1.98 and MPEP Sec. 609 and place their initials adjacent the citations in the spaces provided on this form. Examiners will also initial citations not in conformance with the guidelines which may have been considered. A reference may be considered by the Examiner for any reason whether or not the citation is in full conformance with the guidelines. A line will be drawn through a citation if it is not in conformance with the guidelines AND has not been considered. A copy of the submitted form, as reviewed by the Examiner, will be returned to the applicant with the next communication. The original of the form will be entered into the application file.

Each citation initialed by the Examiner will be printed on the issued patent in the same manner as references cited by the Examiner on Form PTO-892.

The reference designations "A1," "A2," etc. (referring to Applicant's reference 1, Applicant's reference 2, etc.) will be used by the Examiner in the same manner as Examiner's reference designations "A," "B," "C," etc. on Office Action Form PTO-1142.

Examiner: Mark J. Watt Date Considered: 62/14/01

*EXAMINER: Initial if reference considered, whether or not citation is in conformance with MPEP 609; draw line through citation if not in conformance and not considered. Include copy of this form with next communication to applicant.

Commissioner of Patents and Trademarks

Office Action Summary	Application No.	Applicant(s)	
	09/464,989	WESEMANN ET AL.	
	Examiner Nora J Putt	Art Unit 2645	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address --
Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

Status

- 1) Responsive to communication(s) filed on 16 December 1999.
- 2a) This action is FINAL. 2b) This action is non-final.
- 3) Since this application is in condition for allowance except for formal matters, prosecution as to the merits is closed in accordance with the practice under *Ex parte Quayle*, 1935 C.D. 11, 453 O.G. 213.

Disposition of Claims

- 4) Claim(s) 1-60 is/are pending in the application.
- 4a) Of the above claim(s) _____ is/are withdrawn from consideration.
- 5) Claim(s) _____ is/are allowed.
- 6) Claim(s) 1-60 is/are rejected.
- 7) Claim(s) 11,12 and 48 is/are objected to.
- 8) Claims _____ are subject to restriction and/or election requirement.

Application Papers

- 9) The specification is objected to by the Examiner.
- 10) The drawing(s) filed on _____ is/are objected to by the Examiner.
- 11) The proposed drawing correction filed on _____ is: a) approved b) disapproved.
- 12) The oath or declaration is objected to by the Examiner.

Priority under 35 U.S.C. § 119

- 13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All b) Some * c) None of:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)).
- * See the attached detailed Office action for a list of the certified copies not received.
- 14) Acknowledgement is made of a claim for domestic priority under 35 U.S.C. § 119(e).

Attachment(s)

- 15) Notice of References Cited (PTO-892)
- 16) Notice of Draftsperson's Patent Drawing Review (PTO-948)
- 17) Information Disclosure Statement(s) (PTO-1449) Paper No(s) _____.
- 18) Interview Summary (PTO-413) Paper No(s) _____.
- 19) Notice of Informal Patent Application (PTO-152)
- 20) Other: _____

DETAILED ACTION

Claim Objections

1. Claims 11, 12 and 48 are objected to because of the following informalities: In the second line of claim 11, and in the second line of claim 12, the words "any said" should be reversed to read "said any". Also, in the second line of the claim 48, the word "to" following "interface" should be changed to "for" or alternatively, the word "navigating" should be changed to "navigate". Also in claim 48, in the seventh line of the claim, the word "an" following "generating" should be changed to "a". Appropriate correction is required.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless —

(e) the invention was described in a patent granted on an application for patent by another filed in the United States before the invention thereof by the applicant for patent, or on an international application by another who has fulfilled the requirements of paragraphs (1), (2), and (4) of section 371(c) of this title before the invention thereof by the applicant for patent.

3. Claims 1-7, 9-23, 25-33, 35-44, 46-53, 55-58 and 60 are rejected under 35 U.S.C. 102(e) as being anticipated by Wise et al. (US 5884262, March 1999).

4. Regarding claims 1 drawn to a system that includes an information service and an input/output device for interacting with the information service, applicant claims a method of providing an audio interface for accessing electronic documents, the method comprising the acts of: obtaining an electronic document; parsing the electronic document to identify any text and

any links included in the electronic document; and generating an audio representation of at least a portion of the parsed electronic document. Wise et al. teaches providing an audio interface for accessing electronic documents, the method comprising the acts of: obtaining an electronic document; parsing the electronic document to identify any text and any links included in the electronic document; and generating an audio representation of at least a portion of the parsed electronic document (See abstract and column 2 lines 5-33).

5. Regarding claims 2 and 48 drawn to the invention of claim 1, applicant further claims obtaining at least two electronic documents, one of the at least two electronic documents being designated as a prior electronic document and one of the at least two electronic documents being designated as a subsequent electronic document (or as stated in claim 48, obtaining a first and second electronic document); parsing the at least two electronic documents to identify any text and links included in the at least two electronic documents (or as stated in claim 48, parsing the first and then the second electronic document); and making any links identified in the prior electronic document available in the subsequent electronic document (where the audio representation of claim one relates to the first document). Wise et al. teaches obtaining at least two electronic documents, one of the at least two electronic documents being designated as a prior electronic document and one of the at least two electronic documents being designated as a subsequent electronic document (or as stated in claim 48, obtaining a first and second electronic document) (See column 2 lines 59-62); parsing the at least two electronic documents to identify any text and links included in the at least two electronic documents (or as stated in claim 48, parsing the first and then the second electronic document) (See column 2 lines 64-67 and column 5 lines 66-67 and column 6 lines 1-14); and making any links identified in the prior electronic

document available in the subsequent electronic document (where the audio representation of claim one relates to the first document) (See column 6 lines 1-14).

6. Regarding claims 3, 7, 12-13, and 16 drawn to the invention of claim 1, applicant claims further the act of mapping said any text and said any links included in the electronic document to one or more categories; the act of receiving an instruction from the client; and the act of providing the user with a visual representation of the electronic document simultaneously with the act of communicating the audio representation; and wherein the audio representation includes a count of said any links and said any text included in the electronic document; and wherein the electronic document is written in markup language. Wise et al. teaches the act of mapping said any text and said any links included in the electronic document to one or more categories (See column 2 lines 18-29 and column 5 line 67 and column 6 lines 1-4 and column 7 lines 13-27); the act of receiving an instruction from the client (See column 2 lines 42-50); and the act of providing the user with a visual representation of the electronic document simultaneously with the act of communicating the audio representation (See column 8 lines 50-54); and wherein the audio representation includes a count of said any links and said any text included in the electronic document (See column 6 lines 52-64); and wherein the electronic document is written in markup language (See column 2 lines 9-11 - where HTML is an exemplary markup language).

7. Regarding claims 4 and 6 drawn to the invention of claims 1 and 3, applicant claims further the acts of generating an audio representation of the one or more categories; and wherein the act of mapping includes creating a hierarchy of said any text and said any links. Wise et al. teaches the acts of generating an audio representation of the one or more categories (See column

2 lines 18-29); and wherein the act of mapping includes creating a hierarchy of said any text and said any links (See column 7 lines 13-27).

8. Regarding claim 5 drawn to the invention of claims 1, 3 and 4, applicant further claims the act of prompting the client to select one of the one or more categories. Wise et al. teaches prompting the client to select one of the one or more categories (See column 2 lines 43-48 and column 6 lines 58-67).

9. Regarding claims 9-11 drawn to the invention of claims 1 and 7, applicant claims further the instruction received from the client is spoken into the input/output device; and wherein the audio representation includes at least one link and wherein the instruction from the client is to select the at least one link, further comprising the act of following the at least one link; and wherein the audio representation includes only any said links included in the electronic document. Wise et al. the instruction received from the client is spoken into the input/output device (See column 2 lines 42-50); and wherein the audio representation includes at least one link and wherein the instruction from the client is to select the at least one link, further comprising the act of following the at least one link (See column 7 lines 7-33); and wherein the audio representation includes only any said links included in the electronic document (See column 7 lines 2-6).

10. Regarding claims 14 and 15 drawn to the invention of claims 1 and 13, applicant further claims the markup language includes elements that only are capable of describing the visual appearance of the electronic document; and wherein the markup language is one of hypertext markup language and extensible markup language. Wise et al. teaches the markup language includes elements that only are capable of describing the visual appearance of the electronic

document (See column 3 lines 19-24); and wherein the markup language is one of hypertext markup language and extensible markup language (See column 2 lines 7-11 and column 7 lines 28-33).

11. Regarding claim 20, drawn the invention of claim 17, applicant further claims wherein the act of mapping produces exactly one category, and further comprising the act of automatically selecting the one category. Wise et al. teaches the act of mapping producing exactly one category, and further comprising the act of automatically selecting the one category (See column 7 lines 7-11).

12. Regarding claims 17-19 and 21-23, 25-33, 35, 37-44, 46-53 and 55-58 and 60, all elements of the claimed limitations are disclosed in the above rejections and therefore these claims (considered separately or in any combination) are also rejected as anticipated by Wise et al.

Claim Rejections - 35 USC § 103

13. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

14. Claims 8, 11, 24, 34, 36, 45, 54, and 59 are rejected under 35 U.S.C. 103(a) as being unpatentable over Wise et al. in view of Rhie et al. (US 5953392, September 1999).

15. Regarding claims 8, 24, 34, 45, 54, and 59 drawn to the inventions of claims 1, 7, 17, 23, 41, 44, 51, 53 and 56, applicant claims wherein the instruction received from the client is at least one of an instruction to email, fax, or voice mail at least a portion of the electronic document to a

third party selected from the client's contact list. Wise et al. teaches all the limitations of claims 1, 7, 17, 23, 41, 44, 51, 53, and 56 as described in paragraphs 4, 6 and 12 above. Wise et al. further teaches the instruction received from the client is to fax at least a portion of said electronic document to the user's facsimile machine or computer. Wise does not teach the client sending at least a portion of the electronic document to a third party selected from the client's contact list. Rhie et al. teaches a method and apparatus for telephonically accessing and navigating the internet with a document delivery subsystem which provides a method for delivering an electronic document via one of the well known and available methods such as voice, fax-on-demand, electronic mail or regular mail (See abstract - last 5 lines, and column 6 lines 23-33). One of ordinary skill in the art at the time the invention was made would have been motivated to combine the teaching of Rhie, providing multiple flexible methods of delivering information accessed by telephony device, with the teaching of Wise for the desirable purpose of providing a method of accessing and retrieving information from interconnected networks for those who have limited hardware and/or software or who have no means other than telephone to do so (See Rhie, column 1 lines 34-42).

16. Regarding claims 11 and 36 drawn to the invention of claims 1 and 30, applicant further claims the audio representation includes only said any links included in the electronic document. Wise et al. teaches all the limitations of claims 1 and 30 as described in paragraphs 4 and 12 above. Wise does not explicitly teach the audio representation including only links of the electronic document. Wise does teach the user may select the amount of descriptive information recited (See column 7 lines 2-6). Rhie et al. teaches signaling the user in an audio manner the hyperlink selections in a web page (See column 2 lines 4-6). One of ordinary skill in the art at

the time the invention was made would have been motivated to combine the teachings of Rhie with the teachings of Wise (having the user select to hear only the links) for the desirable purpose of providing a method of accessing the hyperlinks of a web page in an inexpensive and efficient manner (See Rhie column 1 lines 47-62).

Conclusion

17. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Kawamata (US 6122290, September 2000), Perrone (US 6157705, December 2000) and Uppaluru (US 5915001, June 1999) are cited as further works in the related field of voice browsers and universal access to the internet and other electronic resources

Any inquiry concerning this communication or earlier communications from the examiner should be directed to Nora J Putt whose telephone number is 703-308-4736. The examiner can normally be reached on M-F 0700-1530.

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Fan Tsang can be reached on 703-305-4895. The fax phone numbers for the organization where this application or proceeding is assigned are 703-308-5403 for regular communications and 703-308-5403 for After Final communications.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the receptionist whose telephone number is 703-305-4700.

Proposed Interview Agenda – Do Not Enter In Record

Examiner Putt, N.

Patent Application Serial No. 09/464,989

VOICE INTERFACE FOR ELECTRONIC DOCUMENTS

Filed: December 16, 1999

Attorney Docket No. 14999.3

Attorney: R. Burns Israelsen

Today's Date: April 16, 2001

In preparation for a requested Examiner Interview, and as requested by the Examiner,
Applicants propose the following agenda:

- I. Attorney to present brief summary of invention.
- II. Attorney to discuss rejected claims and cited art, including the following independent claims:
 - A. Claims 1, 17, 30, 41, 48, 51 and 56, rejected under 35 U.S.C. § 102(c) as being anticipated by U.S. Patent No. 5,884,262 to Wise;
- III. Attorney to present proposed amended claims and discuss how proposed amended claims overcome rejections and distinguish from art of record. A copy of the proposed amended claim 1 accompanies this agenda.
- IV. Attorney to discuss any formal matters.

Any questions regarding this proposed agenda can be directed to R. Burns Israelsen at (801) 533-9800 (phone) or (801) 328-1707 (fax).

Proposed Amended Claims – Do Not Enter In Record
Patent Application Serial No. 09/464,989
VOICE INTERFACE FOR ELECTRONIC DOCUMENTS
Filed: December 16, 1999
Attorney Docket No. 14999.3
Examiner Putt, N.
April 16, 2001

1. (Amended) In a system that includes an information service and a telephone [an input/output device] for interacting with the information service, a method of enabling a user of the telephone to access and navigate [providing an audio interface for accessing] electronic documents by presenting to the user an audio representation of a hierarchy of links of the document so as to enhance the ability of the user to navigate the electronic documents, the method comprising the acts of:

obtaining an electronic document;
parsing the electronic document to identify any text and any links included in the content of the electronic document; [and]
(mapping content of the parsed electronic document by performing the acts of:
determining whether the text and links included in the content of the
document represent categories, first-level links and second-level links; and
to the extent that the text and links represent categories, first-level links
and second level links, creating a hierarchical data structure that associates the
text and links to the categories, the first-level links and the second-level links;
generating an audio representation of at least a portion of the parsed electronic document, the audio representation being communicated to a client; and

prompting the user to select a category from the hierarchical data structure and
then successively prompting the user to select any first-level links and second-level links,
such that the content of the electronic document is presented audibly to the user and the
can make verbal selections.

EXAMINER

ART UNIT	PAPER NUMBER
----------	--------------

DATE MAILED:

INTERVIEW SUMMARY

All participants (applicant, applicant's representative, PTO personnel):

(1) Burns Israelsen (3) Fan Tsaney
(2) Nicole Pett (4) _____

Date of interview 4/17/01

Type: Telephonic Personal (copy is given to applicant applicant's representative).

Exhibit shown or demonstration conducted: Yes No If yes, brief description: _____

Agreement was reached. was not reached.

Claim(s) discussed: 1

Identification of prior art discussed: Wise

Description of the general nature of what was agreed to if an agreement was reached, or any other comments: Applicant pointed out that the proposed claim limitation "1st Level links" "2nd Level links" & "creating a hierarchical data structure" were not taught by reference Wise. Examiner will review the reference and take proper action upon the receipt of a formal amendment.

(A fuller description, if necessary, and a copy of the amendments, if available, which the examiner agreed would render the claims allowable must be attached. Also, where no copy of the amendments which would render the claims allowable is available, a summary thereof must be attached.)

1. It is not necessary for applicant to provide a separate record of the substance of the interview.

Unless the paragraph above has been checked to indicate to the contrary, A FORMAL WRITTEN RESPONSE TO THE LAST OFFICE ACTION IS NOT WAIVED AND MUST INCLUDE THE SUBSTANCE OF THE INTERVIEW. (See MPEP Section 713.04). If a response to the last Office action has already been filed, APPLICANT IS GIVEN ONE MONTH FROM THIS INTERVIEW DATE TO FILE A STATEMENT OF THE SUBSTANCE OF THE INTERVIEW.

2. Since the Examiner's interview summary above (including any attachments) reflects a complete response to each of the objections, rejections and requirements that may be present in the last Office action, and since the claims are now allowable, this completed form is considered to fulfill the response requirements of the last Office action. Applicant is not relieved from providing a separate record of the interview unless box 1 above is also checked.

Examiner Note: You must sign this form unless it is an attachment to another form.

Manual of Patent Examining Procedure, Section 713.04 Substance of Interview must Be Made of Record

A complete written statement as to the substance of any face-to-face or telephone interview with regard to an application must be made of record in the application, whether or not an agreement with the examiner was reached at the interview.

§1.133 Interviews

(b) In every instance where reconsideration is requested in view of an interview with an examiner, a complete written statement of the reasons presented at the interview as warranting favorable action must be filed by the applicant. An interview does not remove the necessity for response to Office action as specified in §§ 1.111, 1.135. (35 U.S.C.132)

§ 1.2. Business to be transacted in writing. All business with the Patent or Trademark Office should be transacted in writing. The personal attendance of applicants or their attorneys or agents at the Patent and Trademark Office is unnecessary. The action of the Patent and Trademark Office will be based exclusively on the written record in the Office. No attention will be paid to any alleged oral promise, stipulation, or understanding in relation to which there is disagreement or doubt.

The action of the Patent and Trademark Office cannot be based exclusively on the written record in the Office if that record is itself incomplete through the failure to record the substance of interviews.

It is the responsibility of the applicant or the attorney or agent to make the substance of an interview of record in the application file, unless the examiner indicates he or she will do so. It is the examiner's responsibility to see that such a record is made and to correct material inaccuracies which bear directly on the question of patentability.

Examiners must complete a two-sheet carbon interleaf Interview Summary Form for each interview held after January 1, 1978 where a matter of substance has been discussed during the interview by checking the appropriate boxes and filling in the blanks in neat handwritten form using a ball point pen. Discussions regarding only procedural matters, directed solely to restriction requirements for which interview recordation is otherwise provided for in Section 812.01 of the Manual of Patent Examining Procedure, or pointing out typographical errors or unreadable script in Office actions or the like, are excluded from the interview recordation procedures below.

The Interview Summary Form shall be given an appropriate paper number, placed in the right hand portion of the file, and listed on the "Contents" list on the file wrapper. The docket and serial register cards need not be updated to reflect interviews. In a personal interview, the duplicate copy of the Form is removed and given to the applicant (or attorney or agent) at the conclusion of the interview. In the case of a telephonic interview, the copy is mailed to the applicant's correspondence address either with or prior to the next official communication. If additional correspondence from the examiner is not likely before an allowance or if other circumstances dictate, the Form should be mailed promptly after the telephonic interview rather than with the next official communication.

The Form provides for recordation of the following information:

- Serial Number of the application
- Name of applicant
- Name of examiner
- Date of interview
- Type of interview (personal or telephonic)
- Name of participant(s) (applicant, attorney or agent, etc.)
- An indication whether or not an exhibit was shown or a demonstration conducted
- An identification of the claims discussed
- An identification of the specific prior art discussed
- An indication whether an agreement was reached and if so, a description of the general nature of the agreement (may be by attachment of a copy of amendments or claims agreed as being allowable). (Agreements as to allowability are tentative and do not restrict further action by the examiner to the contrary.)
- The signature of the examiner who conducted the interview
- Names of other Patent and Trademark Office personnel present.

The Form also contains a statement reminding the applicant of his responsibility to record the substance of the interview.

It is desirable that the examiner orally remind the applicant of his obligation to record the substance of the interview in each case unless both applicant and examiner agree that the examiner will record same. Where the examiner agrees to record the substance of the interview, or when it is adequately recorded on the Form or in an attachment to the Form, the examiner should check a box at the bottom of the Form informing the applicant that he need not supplement the Form by submitting a separate record of the substance of the interview.

It should be noted, however, that the Interview Summary Form will not normally be considered a complete and proper recordation of the interview unless it includes, or is supplemented by the applicant or the examiner to include, all of the applicable items required below concerning the substance of the interview:

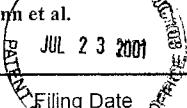

A complete and proper recordation of the substance of any interview should include at least the following applicable items:

- 1) A brief description of the nature of any exhibit shown or any demonstration conducted,
- 2) an identification of the claims discussed,
- 3) an identification of specific prior art discussed,
- 4) an identification of the principal proposed amendments of a substantive nature discussed, unless these are already described on the Interview Summary Form completed by the examiner,
- 5) a brief identification of the general thrust of the principal arguments presented to the examiner. The identification of arguments need not be lengthy or elaborate. A verbatim or highly detailed description of the arguments is not required. The identification of the arguments is sufficient if the general nature or thrust of the principal arguments made to the examiner can be understood in the context of the application file. Of course, the applicant may desire to emphasize and fully describe those arguments which he feels were or might be persuasive to the examiner,
- 6) a general indication of any other pertinent matters discussed, and
- 7) if appropriate, the general results or outcome of the interview unless already described in the Interview Summary Form completed by the examiner.

Examiners are expected to carefully review the applicant's record of the substance of an interview. If the record is not complete or accurate, the examiner will give the applicant one month from the date of the notifying letter or the remainder of any period for response, whichever is longer, to complete the response and thereby avoid abandonment of the application (37 CFR 1.135(c)).

Examiner to Check for Accuracy

Applicant's summary of what took place at the interview should be carefully checked to determine the accuracy of any argument or statement attributed to the examiner during the interview. If there is an inaccuracy and it bears directly on the question of patentability, it should be pointed out in the next Office letter. If the claims are allowable for other reasons of record, the examiner should send a letter setting forth his or her version of the statement attributed to him. If the record is complete and accurate, the examiner should place the indication "Interview record OK" on the paper recording the substance of the interview along with the date and the examiner's initials.

AMENDMENT "A"

Assistant Commissioner for Patents
Washington, D. C. 20231

Sir:

Responsive to the Office Action of February 23, 2001, Applicants respectfully request entry of the following amendments and reconsideration of the pending claims in view of the amendments, the matters discussed at the interview, the remarks herein, and an accompanying Petition for Extension of Time that extends the period of response by two months.

IN THE SPECIFICATION

Please replace the paragraph beginning at page 20, line 22 with the following rewritten paragraph:

In contrast to Figure 5, Figure 11 is a flow chart illustrating the operation of a preferred embodiment of the present invention that provides only the default mapping of separating text and links. In step 1110, a client selects the option of starting with a list of favorite Internet sites. Text to Speech 420 prompts the user to select one of the sites listed, step 1120. As before, in step 1130 the document is retrieved using the protocols that are appropriate given the document's location. Again, as before, the content is parsed in step 1140 to identify any title, any links, any link names, and any text included in the document.

A1) IN THE CLAIMS

Please cancel claims 3, 17-40, 42, 43, 48-50, 52 and 57 without prejudice.

Please amend claims 1, 4, 6, 16, 41, 45-47, 51, 53-56 and 58-60 as follows:

A2) 1. (Amended) In a system that includes an information service and a telephone for interacting with the information service, a method of enabling a user of the telephone to access and navigate electronic documents by presenting to the user an audio representation of a hierarchy of links of the document so as to enhance the ability of the user to navigate the electronic documents, the method comprising the acts of:

obtaining an electronic document;

parsing the electronic document to identify any text and any links included in the content of the electronic document;

mapping content of the parsed electronic document by performing the acts of:

determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another; and

A2 to the extent that the text and links represent categories, first-level links and second level links, creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links;

generating an audio representation of at least a portion of the parsed electronic document, the audio representation being communicated to a client; and

prompting the user to select a category from the hierarchical data structure and then successively prompting the user to select any first-level links and second-level links, such that the content of the electronic document is presented audibly to the user and the

B User can make verbal selections.

A3 ³ ~~4.~~ (Amended) A method as recited in claim 1 further comprising the acts of generating an audio representation of the one or more categories.

A4 ⁴ ~~5.~~ (Amended) A method as recited in claim 1 wherein the act of mapping includes creating a hierarchy of said any text and said any links.

A5 ⁵ ~~16.~~ (Amended) A method as recited in claim 1 further comprising the act of providing the user with a visual representation of the electronic document simultaneously with the act of generating the audio representation.

1641. (Amended) In an information system that has access, through the Internet, to electronic documents, wherein the electronic documents are written in a markup language having *B* elements that ~~only~~ *are only* capable of describing the visual appearance of the electronic documents, and the information system is connected to a client by a telephony infrastructure, a method for providing the user with telephone access to the electronic documents, the method comprising the acts of:

obtaining an electronic document through the Internet;

A6
parsing the electronic document to identify any text and any links included in the content of the electronic document;

mapping content of the parsed electronic document by performing the acts of:

determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another; and

to the extent that the text and links represent categories, first-level links and second level links, creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links;

prompting the client to traverse the hierarchical data structure, including automatically selecting any category and any associated link when exactly one category and exactly one associated link is present;

receiving input from the client to traverse the hierarchical data structure, wherein the input includes instructions for selecting an electronic document with text; and

A6

generating an audio representation of the parsed electronic document, including a count of any links and any text present in the electronic document, the audio representation being communicated to the client.

17

44. (Amended) A method as recited in claim 41, wherein the instruction is spoken

into the telephone.

A7

18

45. (Amended) A method as recited in claim 44, wherein the input further includes at least one of an instruction to email, fax, or voice mail at least a portion of the electronic document to a third party selected from a contact list of the client.

19

46. (Amended) A method as recited in claim 44, wherein the audio representation includes information representing at least one link and wherein the input includes an instruction to select the at least one link, the method further comprising the act of following the at least one link.

20

47. (Amended) A method as recited in claim 41 further comprising the act of providing the user with a visual representation of the electronic document simultaneously with the act of generating the audio representation.

21 21. (Amended) A system providing access, through an audio interface, to electronic documents so as to enable a user of the audio interface to access and navigate the electronic documents by presenting to the user a hierarchy of links of the document the system comprising:

processor means for obtaining an electronic document;

processor means for parsing the electronic document to identify any text and any links included in the content of the electronic document;

processor means for mapping content of the parsed electronic document by performing the acts of:

determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another; and

to the extent that the text and links represent categories, first-level links and second level links, creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links;

processor means for generating an audio representation of at least a portion of the parsed electronic document, the audio representation being communicated to a client; and

processor means for prompting the user to select a category from the hierarchical data structure and then successively prompting the user to select any first-level links and second-level links, such that the content of the electronic document is presented audibly

B to the user and the can make verbal selections.

23 53. (Amended) A system as recited in claim *21* further comprising processor means for receiving spoken input from the user.

23 54. (Amended) A system as recited in claim *53* wherein the input comprises at least one of an instruction to email, fax, or voice mail at least a portion of the electronic document to a third party selected from a contact list of the client.

24 55. (Amended) A system as recited in claim *53* wherein the audio representation includes information representing at least one link and wherein the input includes an instruction to select the at least one link, the system further comprising processor means for following the at least one link.

25
86. (Amended) A computer program product for providing access, through an audio interface, to electronic documents so as to enable a user of the audio interface to access and navigate the electronic documents by presenting to the user a hierarchy of links of the document, the computer program product comprising:

a computer-readable medium carrying computer-executable instructions for implementing the method, the computer-executable instructions comprising:

program code means for obtaining an electronic document;

program code means for parsing the electronic document to identify any text and any links included in the content of the electronic document;

A9
program code means for mapping content of the parsed electronic document by performing the acts of:

determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another; and

to the extent that the text and links represent categories, first-level links and second level links, creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links;

program code means for generating an audio representation of at least a portion of the parsed electronic document, the audio representation being communicated to a client; and

program code means for prompting the user to select a category from the hierarchical data structure and then successively prompting the user to select any

A9

B first-level links and second-level links, such that the content of the electronic document is presented audibly to the user and the ^{user} can make verbal selections.

26

58. (Amended) A computer-readable medium as recited in claim 56 wherein the computer-executable instructions further comprises program code means for receiving spoken input from the user.

A10

27

59. (Amended) A computer-readable medium as recited in claim 58 wherein the input comprises at least one of an instruction to email, fax, or voice mail at least a portion of the electronic document to a third party selected from a contact list of the client.

28

60. (Amended) A computer-readable medium as recited in claim 58 wherein the audio representation includes information representing at least one link and wherein the input includes an instruction to select the at least one link, wherein the computer-executable instructions further comprise program code means for following the at least one link.

REMARKS

Applicants express appreciation to the Examiner for the Interview of April 17, 2001 conducted with Applicants' attorneys. The Office Action of February 23, 2001 rejected claims 1-60. By this paper, claims 3, 17-40, 42, 43, 48-50, 52 and 57 have been canceled. Accordingly, claims 1, 2, 4-16, 41, 44-47, 51, 53-56 and 58-60 are pending. Applicants respectfully request favorable reconsideration of the pending claims in view of the amendments made herein and the matters discussed at the interview.

The Office Action rejected claims 1-7, 9-23, 25-33, 35-44, 46-53, 55-58 and 60 under 35 U.S.C. § 102(e) as being anticipated by U.S. Patent No. 5,884,262 to Wise. Claims 8, 11, 24, 34, 36, 45, 54 and 59 were rejected under 35 U.S.C. § 103(a) as being unpatentable over Wise in view of U.S. Patent No. 5,953,392 to Rhie.

At the Interview of April 17, 2001, Applicants' attorney discussed proposed amendments to claim 1. Claim 1 as amended now recites:

mapping content of the parsed electronic document by performing the acts of:

determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another; and

to the extent that the text and links represent categories, first-level links and second level links, creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links;

As discussed at the interview, neither Wise nor Rhie teach or suggest mapping content of a parsed electronic document in the foregoing manner. In particular, Wise and Rhie fail to teach

or suggest “determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another” and further fail to teach or suggest “creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links.”

Mapping the content of a parsed electronic document as recited in claim 1 as amended can provide certain benefits not understood in the prior art, including enhancing the ability of the user to navigate electronic documents. Moreover, claim 1 as amended recites:

prompting the user to select a category from the hierarchical data structure and then successively prompting the user to select any first-level links and second-level links, such that the content of the electronic document is presented audibly to the user and the can make verbal selections

As further discussed at the Interview, none of the cited references prompt a user to select from a hierarchical structure in the foregoing manner. Applicants respectfully submit that claim 1 as amended distinguishes from the cited references for the foregoing reasons.

The other independent claims 41, 51 and 56 include a limitation substantially similar to the act of “mapping content of the parsed electronic document . . .” discussed above in reference to claim 1. In addition, claims 51 and 56 include a limitation substantially similar to the act of “prompting the user to select a category from the hierarchical data structure . . .” discussed above in reference to claim 1. Applicants respectfully submit that claims 41, 51 and 56 also distinguish from the cited references for at least these reasons.

The other pending claims are dependent claims that depend from the independent claims discussed above and are patentable at least on the basis of their dependency from a patentable base claim.

Applicants also point out that several of the claims have been amended to promote clarity, to provide terminology that is consistent with that of the base claims, and for other reasons that are not related to either responding to a rejection of the claims or distinguishing from cited art.

Attached hereto is a marked-up version of the changes made to the previous version of the specification and claims by this amendment. The attached pages are captioned "VERSION WITH MARKINGS TO SHOW CHANGES MADE."

For the foregoing reasons, Applicants submit that the pending claims are in condition for allowance and courteously request favorable action. If there are any outstanding issues that could be resolved by telephone, the Examiner is invited to contact the undersigned attorney.

Dated this 23rd day of July, 2001.

Respectfully submitted,

R. BURNS ISRAELSEN
Attorney for Applicant

VERSION WITH MARKINGS TO SHOW CHANGES MADE

IN THE SPECIFICATION

At page 21, line 2, "in" has been replaced with --is--.

IN THE CLAIMS

Claims 3, 17-40, 42, 43, 48-50, 52 and 57 have been canceled.

Claims 1, 4, 6, 16, 41, 45-47, 51, 53-56 and 58-60 have been amended as follows:

1. (Amended) In a system that includes an information service and a telephone [an input/output device] for interacting with the information service, a method of enabling a user of the telephone to access and navigate [providing an audio interface for accessing] electronic documents by presenting to the user an audio representation of a hierarchy of links of the document so as to enhance the ability of the user to navigate the electronic documents, the method comprising the acts of:

obtaining an electronic document;

parsing the electronic document to identify any text and any links included in the content of the electronic document; [and]

mapping content of the parsed electronic document by performing the acts of:

determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another; and

to the extent that the text and links represent categories, first-level links and second level links, creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links;

generating an audio representation of at least a portion of the parsed electronic document, the audio representation being communicated to a client; and

prompting the user to select a category from the hierarchical data structure and then successively prompting the user to select any first-level links and second-level links, such that the content of the electronic document is presented audibly to the user and the can make verbal selections.

4. (Amended) A method as recited in claim 1 [3] further comprising the acts of generating an audio representation of the one or more categories.

6. (Amended) A method as recited in claim 1 [3] wherein the act of mapping includes creating a hierarchy of said any text and said any links.

16. (Amended) A method as recited in claim 3 further comprising the act of providing the user with a visual representation of the electronic document simultaneously with the act of generating [communicating] the audio representation.

41. (Amended) In an information system that has access, through the Internet, to [one or more] electronic documents, wherein the [one or more] electronic documents are written in a markup language having elements that only are capable of describing the visual appearance of the [one or more] electronic documents, and the information system is connected to a client by a telephony infrastructure, a method for providing the user with telephone access to the [one more] electronic documents, the method comprising the acts of:

obtaining an [one of the one or more] electronic document through the Internet [documents];

parsing the [one] electronic document to identify any text and any links included in the content of the [one] electronic document; [and]

mapping content of the parsed electronic document by performing the acts of:

determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another; and

to the extent that the text and links represent categories, first-level links and second level links, creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links;

prompting the client to traverse the hierarchical data structure, including automatically selecting any category and any associated link when exactly one category and exactly one associated link is present;

receiving input from the client to traverse the hierarchical data structure, wherein the input includes instructions for selecting an electronic document with text; and

generating an audio representation of [at least a portion of] the parsed [one] electronic document, including a count of any links and any text present in the electronic document, the audio representation being communicated to the client.

44. (Amended) A method as recited in claim 41 [further comprising the act of receiving an instruction from the client], wherein the instruction is spoken into the telephone.

45. (Amended) A method as recited in claim 44, wherein the input further includes [instruction received from the client is] at least one of an instruction to email, fax, or voice mail

at least a portion of the electronic document to a third party selected from a [the client's] contact list of the client.

46. (Amended) A method as recited in claim 44, wherein the audio representation includes information representing at least one link and wherein the input includes an instruction [from the client is] to select the at least one link, the method further comprising the act of following the at least one link.

47. (Amended) A method as recited in claim 41 further comprising the act of providing the user with a visual representation of the electronic document simultaneously with the act of generating [communicating] the audio representation.

51. (Amended) A system providing access, through an audio interface, to electronic documents[,] so as to enable a user of the audio interface to access and navigate the electronic documents by presenting to the user a hierarchy of links of the document [wherein the electronic documents are written in a markup language having elements that only are capable of describing the visual appearance of the electronic documents,] the system comprising:

processor means for obtaining an electronic document;

processor means for parsing the electronic document to identify any text and any links included in the content of the electronic document; [and]

processor means for mapping content of the parsed electronic document by performing the acts of:

determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another; and

to the extent that the text and links represent categories, first-level links and second level links, creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links;

processor means for generating an audio representation of at least a portion of the parsed electronic document, the audio representation being communicated to a client; and
processor means for prompting the user to select a category from the hierarchical data structure and then successively prompting the user to select any first-level links and second-level links, such that the content of the electronic document is presented audibly to the user and the can make verbal selections.

53. (Amended) A system as recited in claim 51 further comprising processor means for receiving [a] spoken input [instruction] from the user [client].

54. (Amended) A system as recited in claim 53 wherein the input comprises [instruction received from the client is] at least one of an instruction to email, fax, or voice mail at least a portion of the electronic document to a third party selected from a [the client's] contact list of the client.

55. (Amended) A system as recited in claim 53 wherein the audio representation includes information representing at least one link and wherein the input includes an instruction [from the client is] to select the at least one link, the system further comprising processor means for following the at least one link.

56. (Amended) A computer program product for providing access, through an audio interface, to electronic documents[,] so as to enable a user of the audio interface to access and navigate the electronic documents by presenting to the user a hierarchy of links of the document [wherein the electronic documents are written in a markup language having elements that only are capable of describing the visual appearance of the electronic documents,] the computer program product comprising:

a computer-readable medium carrying computer-executable instructions for implementing the method, the computer-executable instructions comprising:

program code means for obtaining an electronic document;

program code means for parsing the electronic document to identify any text and any links included in the content of the electronic document; [and]

program code means for mapping content of the parsed electronic document by performing the acts of:

determining whether the text and links included in the content of the document represent categories, first-level links and second-level links in a hierarchical relationship one with another; and

to the extent that the text and links represent categories, first-level links and second level links, creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links;

program code means for generating an audio representation of at least a portion of the parsed electronic document, the audio representation being communicated to a client; and

program code means for prompting the user to select a category from the hierarchical data structure and then successively prompting the user to select any first-level links and second-level links, such that the content of the electronic document is presented audibly to the user and the can make verbal selections.

58. (Amended) A computer-readable medium as recited in claim 56 wherein the computer-executable instructions further comprises program code means for receiving [a] spoken input [instruction] from the user [client].

59. (Amended) A computer-readable medium as recited in claim 58 wherein the input comprises [instruction received from the client is] at least one of an instruction to email, fax, or voice mail at least a portion of the electronic document to a third party selected from a [the client's] contact list of the client.

60. (Amended) A computer-readable medium as recited in claim 58 wherein the audio representation includes information representing at least one link and wherein the input includes an instruction [from the client is] to select the at least one link, wherein the computer-executable instructions further comprise [comprises] program code means for following the at least one link.

APPLICATION NO.	FILING DATE	TOTAL CLAIMS	EXAMINER AND GROUP ART UNIT	DATE MAILED
09/464,989	12/16/99	028	ESCALANTE, O	2645 09/28/01
First Named Applicant	WESEMANN,			

TITLE OF INVENTION VOICE INTERFACE FOR ELECTRONIC DOCUMENTS

ATTY'S DOCKET NO.	CLASS-SUBCLASS	BATCH NO.	APPLN. TYPE	SMALL ENTITY	FEES DUE	DATE DUE
2 14999.3	379-088.010	M74	UTILITY	NO	\$1240.00	12/28/01

**THE APPLICATION IDENTIFIED ABOVE HAS BEEN EXAMINED AND IS ALLOWED FOR ISSUANCE AS A PATENT.
PROSECUTION ON THE MERITS IS CLOSED.**

**THE ISSUE FEE MUST BE PAID WITHIN THREE MONTHS FROM THE MAILING DATE OF THIS NOTICE OR THIS
APPLICATION SHALL BE REGARDED AS ABANDONED. THIS STATUTORY PERIOD CANNOT BE EXTENDED.**

HOW TO RESPOND TO THIS NOTICE:

I. Review the SMALL ENTITY status shown above.
If the SMALL ENTITY is shown as YES, verify your current SMALL ENTITY status:

A. If the status is changed, pay twice the amount of the FEE DUE shown above and notify the Patent and Trademark Office of the change in status, or
B. If the status is the same, pay the FEE DUE shown above.

If the SMALL ENTITY is shown as NO:

A. Pay FEE DUE shown above, or
B. File verified statement of Small Entity Status before, or with, payment of 1/2 the FEE DUE shown above.

II. Part B-Issue Fee Transmittal should be completed and returned to the Patent and Trademark Office (PTO) with your ISSUE FEE. Even if the ISSUE FEE has already been paid by charge to deposit account, Part B-Issue Fee Transmittal should be completed and returned. If you are charging the ISSUE FEE to your deposit account, section "4b" of Part B-Issue Fee Transmittal should be completed and an extra copy of the form should be submitted.
III. All communications regarding this application must give application number and batch number.
Please direct all communications prior to issuance to Box ISSUE FEE unless advised to the contrary.

IMPORTANT REMINDER: Utility patents issuing on applications filed on or after Dec. 12, 1980 may require payment of maintenance fees. It is patentee's responsibility to ensure timely payment of maintenance fees when due.

Notice of Allowability

Application No.	Applicant(s)	
09/464,989	WESEMANN ET AL.	
Examiner	Art Unit	
Ovidio Escalante	2645	

-- The MAILING DATE of this communication appears on the cover sheet with the correspondence address--

All claims being allowable, PROSECUTION ON THE MERITS IS (OR REMAINS) CLOSED in this application. If not included herewith (or previously mailed), a Notice of Allowance (PTOL-85) or other appropriate communication will be mailed in due course. THIS NOTICE OF ALLOWABILITY IS NOT A GRANT OF PATENT RIGHTS. This application is subject to withdrawal from issue at the initiative of the Office or upon petition by the applicant. See 37 CFR 1.313 and MPEP 1308.

1. This communication is responsive to July 23, 2001.
 2. The allowed claim(s) is/are 1,2,4-16,41,44-47,51,53-56,58-60, (renumbered 1-28).
 3. The drawings filed on _____ are accepted by the Examiner.
 4. Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).
 - a) All
 - b) Some*
 - c) None of the:
 1. Certified copies of the priority documents have been received.
 2. Certified copies of the priority documents have been received in Application No. _____.
 3. Copies of the certified copies of the priority documents have been received in this national stage application from the International Bureau (PCT Rule 17.2(a)).
- * Certified copies not received: _____.
5. Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).
 - (a) The translation of the foreign language provisional application has been received.
 6. Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.

Applicant has THREE MONTHS FROM THE "MAILING DATE" of this communication to file a reply complying with the requirements noted below. Failure to timely comply will result in ABANDONMENT of this application. THIS THREE-MONTH PERIOD IS NOT EXTENDABLE.

7. A SUBSTITUTE OATH OR DECLARATION must be submitted. Note the attached EXAMINER'S AMENDMENT or NOTICE OF INFORMAL PATENT APPLICATION (PTO-152) which gives reason(s) why the oath or declaration is deficient.

8. CORRECTED DRAWINGS must be submitted.
 - (a) including changes required by the Notice of Draftsperson's Patent Drawing Review (PTO-948) attached 1) hereto or 2) to Paper No. _____.
 - (b) including changes required by the proposed drawing correction filed _____, which has been approved by the Examiner.
 - (c) including changes required by the attached Examiner's Amendment / Comment or in the Office action of Paper No. _____.

Identifying indicia such as the application number (see 37 CFR 1.84(c)) should be written on the drawings in the top margin (not the back) of each sheet. The drawings should be filed as a separate paper with a transmittal letter addressed to the Official Draftsperson.

9. DEPOSIT OF and/or INFORMATION about the deposit of BIOLOGICAL MATERIAL must be submitted. Note the attached Examiner's comment regarding REQUIREMENT FOR THE DEPOSIT OF BIOLOGICAL MATERIAL.

DETAILED ACTION

1. This action is in response to applicant's amendment filed on July 23, 2001. **Claims 1,2,4-16,41,44-47,51,53-56,58-60** are now pending in the present application.

EXAMINER'S AMENDMENT

2. An examiner's amendment to the record appears below. Should the changes and/or additions be unacceptable to applicant, an amendment may be filed as provided by 37 CFR 1.312. To ensure consideration of such an amendment, it MUST be submitted no later than the payment of the issue fee.

Authorization for this examiner's amendment was given in a telephone interview with R. Burns Israelsen on September 21, 2001.

The application has been amended as follows:

In claim 1, line 21, before "can" insert --user--

In claim 11, line 2, delete "any"

In claim 12, line 2, delete "any" (both occurrences)

In claim 14, line 2 change "only are" to --are only--

In claim 41, line 3, change "only are" to --are only--

In claim 51, lines 3, change "document/the" to --document, the--

In claim 51, line 21, before "can" insert --user--

In claim 56, line 4, change "document the" to --document, the--

In claim 56, line 25, before "can" insert --user--

Drawings

3. The Drawings submitted on December 16, 1999 have been approved by the Draftsman.

REASONS FOR ALLOWANCE

4. The following is an examiner's statement of reasons for allowance:

The prior art of record fails to disclose or render obvious, alone or in combination, claims 1,2,4-16,41,44-47,51,53-56,58-60, (renumbered 1-28). The subject claims are directed to a system, method and computer program product for enabling a user to access and navigate electronic documents via a telephone.

Specifically regarding claims 1,41,51 and 56, the prior art of record does not teach or suggest the feature of determining whether the text and links which was parsed represent categories, first-level links and second-level links in a hierarchical relationship with each other and creating a hierarchical data structure that associates the text and links to the categories, the first-level links and the second-level links; and prompting the user to select a category from the hierarchical data structure.

The previously applied prior art of record Wise et al. US Patent 5,884,262 teaches a system and method for accessing electronic documents via a telephone. The system of Wise parses the electronic documents to determine the content of the document which includes determining the headers, labels, text graphics, audio information, comments and other types of content. Wise, however, fails to teach of creating a hierarchical relationship of the content of the electronic document with each other.

The prior art of record Rhie et al. US Patent 5,953,392 teaches a system for accessing and browsing the Internet through the use of a telephone. The system performs text to speech

translations of the text on the page. Rhie, however fails to teach or suggest of determining whether the text and links represent categories, first-level links and second-level links in a hierarchical relationship with each other and creating a hierarchical data structure that associated the text and links to the categories, the first-level links and the second-level links; and prompting the user to select a category from the hierarchical data structure.

The remaining prior art of record fails to teach the above feature or provide a motivation to add such a feature.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

5. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Ball et al. US Patent 6,240,391 B1 teaches of a method for assembling and presenting a structured electronic message. Ball however fails to teach of creating a hierarchical relationship of the content of the electronic message.

Saylor et al. US Patent 6,263,051 B1 teaches of a method of providing a user an electronic message which will allow a user to navigate though a series of categories in hierarchical relationship with each other. Saylor however fails to teach of parsing a document to determine the content of the electronic page and creating a hierarchical relationship based on the parsing.

Ladd et al. US Patent 6,269,336 B1 teaches of a markup language to provide interactive service. Ladd however, fails to teach or suggest of determining whether the text and links represent categories, first-level links and second-level links in a hierarchical relationship with each other and creating a hierarchical data structure that associated the text and links to the categories, the first-level links and the second-level links; and prompting the user to select a category from the hierarchical data structure.

6. Any response to this action should be mailed to:

Commissioner of Patents and Trademarks
Washington, D.C. 20231

or faxed to:

(703) 872-9314, (for formal communications intended for entry)

Or:

(703) 872-9314, (for informal or draft communications, please label
"PROPOSED" or "DRAFT")

Hand-delivered responses should be brought to Crystal Park II, 2121 Crystal Drive, Arlington, VA, Sixth Floor (Receptionist).

7. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Ovidio Escalante whose telephone number is (703) 308-6262. The examiner can normally be reached on Monday to Friday from 6:30 AM to 5:00 PM.

Application/Control Number: 09/464,989
Art Unit: 2645

Page 6

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Fan Tsang, can be reached on (703) 305-4895. The fax phone number for this Group is (703) 872-9314.

Communications via Internet e-mail regarding this application, other than those under 35 U.S.C. 132 or which otherwise require a signature, may be used by the applicant and should be addressed to [fan.tsang@uspto.gov].

All Internet e-mail communications will be made of record in the application file. PTO employees do not engage in Internet communications where there exists a possibility that sensitive information could be identified or exchanged unless the record includes a properly signed express waiver of the confidentiality requirements of 35 U.S.C. 122. This is more clearly set forth in the Interim Internet Usage Policy published in the Official Gazette of the Patent and Trademark on February 25, 1997 at 1195 OG 89.

Any inquiry of a general nature or relating to the status of this application or proceeding should be directed to the Technology Center 2600 Customer Service Office whose telephone number is (703) 306-0377.

Hm

Sir:

The enclosed Notice of Allowance and Issue Fee due is submitted herewith pursuant to 37 C.F.R. § 1.67 and M.P.E.P. 603.01 for filing in the matter of the United States patent application as hereinabove identified. Enclosed is PTO Form 2038 for \$670.00 for payment of the issue fee.

The Commissioner is hereby authorized to credit any overpayment or charge any additional fees to Deposit Account No. 23-3178 of the undersigned. Triplicate copies of this sheet are enclosed.

Please address all future correspondence in connection with the above-identified patent application to the attention of the undersigned.

Comments on Statement of Reasons for Allowance

Applicants respectfully submit that the claimed invention as set forth in each of the independent claims and the dependent claims must be read as a whole, and not as a single feature or subcombination of features which represent less than the entirety of the claimed invention as a whole. While a particular feature or subcombination of features referred to by the Examiner in the Statement of Reasons for Allowance may represent a basis for distinguishing the claimed invention over the prior art, Applicants further submit that this may not necessarily be the *sole* ground for distinguishing the claimed invention over the prior art of record. Accordingly, the Examiner's statement should, in Applicants' view, not be read as constituting or meaning that the invention can or should be reduced to a single "feature" of the invention or to a subcombination of features that is less than the entire invention claimed as a whole, nor that the single feature referenced by the Examiner or subcombination of features referenced by the Examiner in the Statement of Reasons for Allowance is the only or sole grounds for distinguishing the invention over the prior art of record.

Dated this 21 day of December, 2001.

Respectfully submitted,
R. Burns Israel

R. BURNS ISRAELSEN
Attorney for Applicant
Registration No. 42,685

PATENT TRADEMARK OFFICE

PART B—ISSUE FEE TRANSMITTAL

Complete and **sign** this form, together with applicable fees, to: **Box ISSUE FEE
Assistant Commissioner for Patents
Washington, D.C. 20231**

MAILING INSTRUCTIONS: This form should be used for transmitting the ISSUE FEE. Blocks 1 through 4 should be completed in ink or type. All further correspondence including the Issue Fee Receipt, the Patent, assignment and notification of maintenance fees will be mailed to the current correspondence address as indicated unless corrected below or directed otherwise in Block 1, by (a) specifying a new correspondence address; and/or (b) indicating a separate "FEE ADDRESS" for maintenance fee notifications.

CURRENT CORRESPONDENCE ADDRESS (Note: Legibly mark-up with any corrections or use Block 1)

022913
WORKMAN NYDEGGER & SEELEY
1000 EAGLE GATE TOWER
60 EAST SOUTH TEMPLE
SALT LAKE CITY UT 84111

WM02/0928

Note: The certificate of mailing below can only be used for domestic mailings of the Issue Fee Transmittal. This certificate cannot be used for any other accompanying papers. Each additional paper, such as an assignment or formal drawing, must have its own certificate of mailing.

Certificate of Mailing

I hereby certify that this Issue Fee Transmittal is being deposited with the United States Postal Service with sufficient postage for first class mail in an envelope addressed to the Box Issue Fee address above on the date indicated below.

Dolly Burnett (Depositor's name)
Dolly Burnett (Signature)

2 14999.3	379-088.010	M74	UTILITY	NO	\$1240.00	12/28/01

1. Change of correspondence address or indication of "Fee Address" (37 CFR 1.383). Use of PTO form(s) and Customer Number are recommended, but not required.

Change of correspondence address (or Change of Correspondence Address form PTO/SB/122) attached.

"Fee Address" indication (or "Fee Address" indication form PTO/SB/47) attached.

2. For printing on the patent front page, list (1) the names of up to 3 registered patent attorneys or agents OR, alternatively, (2) the name of a single firm (having as a member a registered attorney or agent) and the names of up to 2 registered patent attorneys or agents. If no name is listed, no name will be printed.

Workman, Nydegger &

Seeley

3

3. ASSIGNEE NAME AND RESIDENCE DATA TO BE PRINTED ON THE PATENT (print or type)

PLEASE NOTE: Unless an assignee is identified below, no assignee data will appear on the patent. Inclusion of assignee data is only appropriate when an assignment has been previously submitted to the PTO or is being submitted under separate cover. Completion of this form is NOT a substitute for filing an assignment.

(A) NAME OF ASSIGNEE Talk2 Technology, Inc.

(B) RESIDENCE: (CITY & STATE OR COUNTRY)

Salt Lake City, Utah

Please check the appropriate assignee category indicated below (will not be printed on the patent)

Individual corporation or other private group entity government

4a. The following fees are enclosed (make check payable to Commissioner of Patents and Trademarks):

Issue Fee Advance Order - # of Copies 10

4b. The following fees or deficiency in these fees should be charged to:

DEPOSIT ACCOUNT NUMBER _____
(ENCLOSE AN EXTRA COPY OF THIS FORM)

Issue Fee Advance Order - # of Copies _____

The COMMISSIONER OF PATENTS AND TRADEMARKS IS requested to apply the issue fee to the application identified above.

Guide to Filing a Utility Patent Application

INTRODUCTION

1210

The U. S. Patent and Trademark Office (PTO) is the government agency responsible for examining patent applications and issuing patents. A patent is a type of property right. It gives the patent holder the right, for a limited time, to exclude others from making, using, or selling the subject matter that is within the scope of protection granted by the patent. The PTO determines whether a patent should be granted in particular case. However, it is up to the patent holder to enforce his or her own rights if the PTO does grant a patent.

The purpose of this guide is to provide you with basic information about filing a utility patent application. A patent application is a complex legal document, best prepared by one trained to prepare such documents. Thus, after reviewing this guide, you may wish to consult with a patent attorney or agent. Additional information is available:

- by calling the PTO's General Information Services at 800-PTO-9199 or 703-308-4357,
- from the PTO's Web site at www.uspto.gov, and 1220
- at your nearest Patent and Trademark Depository Library (PTDL). You will find information
- regarding the nearest PTDL at the end of this guide. 1230

There are various types of patents -- utility, design, and plant. There are also two types of utility patent application -- provisional and nonprovisional. Each year the PTO receives approximately 200,000 patent applications. Most of these are for nonprovisional utility patents.

This guide contains information to assist you in filing your nonprovisional utility patent application. It discusses the required parts of the utility patent application and includes samples of some of the forms you may use. This information is generally derived from the Patent Act, found at Title 35 of the United States Code (U.S.C.), and Title 37 of the Code of Federal Regulations (CFR). These materials are available at PTDLs and at most law libraries.
